

Climate Change Speech in Boston Commons

On a chilly afternoon, around 5PM in the famous Boston Common urban park, the Socialist Candidate /u/KayAyTeeEe has started her speech regarding climate change, the dangers associated with it and how the Republican administration failed to fight it.

Almost a thousand people have gathered to listen to her, surrounding the stage placed near the middle of the Boston Commons park.

The event's crowd, clearly supportive of /u/KayAyTeeEe's views.

The day is a slightly sunny, chilly afternoon with a mild breeze from the coast.

/u/KayAyTeeEe enters the stage and picks up the microphone.

Welcome to all gathered here, to listen to me! It is quite nice to see so many of our comrades supporting the Socialist cause in AC-1! I am thankful for everyone who has shown up here, and I am glad to have this opportunity to speak to you all.

I will proceed to speak about the insanely important, especially in the light of recent events, the issue of climate change.

As we all know, for the last tens of years the climate on earth has been warming, because of the emissions of greenhouse gasses. This is a REAL and VISIBLE danger to all of us. If we continue to refuse to take any inaction, and instead keep the emissions of the numerous gasses at the same level, within around fifty years we are going to cause paramount damage to the natural environment.

I consider myself to be a very environmental person. I will always continue to prioritize conservation of our planet as one of the most important goals of humanity, especially when we are so visibly damaging it. The seventh mass extinction event may be finally the end of the human race.

You may see many people claiming that "human ingenuity will always save us", or that we will somehow invent new technology that will save us from the threat of climate change. I don't believe such baseless claims. Humans are not immortal and climate change causing human extinction is a realistic scenario if we do not cease our current operations.

The Republican administration, of course, has as always picked an anti-intellectualist stance, with numerous members refusing to address the tremendously important threat of global warming. With the Gunnz administration attempting to cut carbon taxes, their ignorance of the threat is very high.

I in Congress have always supported pro-environmental legislation, and I will continue to do so; unlike the Republican opposition, who seem oblivious to the issue of the climate crisis.

The Socialist Party has always supported progressive pro-environmental legislation in order to conserve our beautiful planet, instead of claiming that 97% of scientists are wrong like many Republicans do.

The Republicans refuse to address the issue of paramount importance that climate change is. Republican President Gunnz has in the past complained about America having to lead the fight against climate change.

America is one of the most powerful countries on the globe. We need to start encouraging and fighting against the threat of climate crisis on the international and local stage. The capitalist system promoted by those who oppose fair socialist policy values profits over the environment. Whilst the old rich men get wealthier, people who are currently not even adults will be affected by this inhumane policy.

The threat of climate change should not be underestimated. It's a real and present threat to our society and the existence of the human race itself. It is our duty to fight against the top 100 corporations which produce 71% of the CO2 emissions. We have to abolish the unsustainable capitalist system we have put in place.

One may look at for example Cuba, which has been rated the most sustainably developing country in the world. Cuba, a socialist country which has a better healthcare system than America, yet which is so much poorer than us. It is not an issue of resources, it's an issue of greed and oligarchy.

To protect the environment, we need to finally attack the people responsible for allowing this situation to occur in the first place, this is the wealthy people who buy off politicians, who don't care about the environment due to the fact that they'll die before climate change hits us.

This is mainly a threat to young people, the next generations. Our children have the same right as us for a clean, sustainable environment, instead of the dying, polluted climate we are creating right now.

This is why I call for everyone to support the Socialist Party, so we can finally achieve our goals for the better of all people, and not for the better of just the few wealthy men.

Thank you for listening, and as always I encourage all of you to vote for me and other Socialist Party candidates.

/u/KayAyTeeEe leaves the stage in a wave of applause. The crowd now slowly disperses, continuing their normal affairs while thinking about the candidate's speech.
