

Rocks and Minerals Project

Learning Goal:

Create a slide show presentation on Google Slides and present it to the class.

Success Criteria:

Must choose a topic about rocks and minerals. For example, Sedimentary Rocks, Volcanoes, Tectonic Plates, Stalactites vs. Stalagmites, Marble, Amethyst, Underground Mining, or anything else you like! Just get your topic approved by Mr. Van Pelt

Create a slideshow that is approximately 5 minutes long.

Should include LOTS of DETAIL and facts about your topic using different categories.

Needs a Title Slide and a conclusion slide.

Can include a combination of photos and text.

The best presentations will fully inform the class about your topic, be clearly presented in a loud, clear voice and have no spelling errors in your slides.
