

## Cut Them Down!

The documentary Cut Them Down! is about how forests are being destroyed. It was the best documentary I have ever seen. Although many of the pictures were very sad to see, I believe it is a very interesting documentary to watch. I would advise everyone to watch it because I learned so much from it. I have been reading a lot about the problem recently. That made me think that there was no way to save the forests. Rainforests are areas of tall, mostly green, trees. They are found in many parts in the world including Africa, Central Asia and Australia. The biggest rainforest in South America is the size of America! Rainforests are humid with high amounts of rainfall. Rainforests are the perfect environment for animals to live in. The weather is quite warm and never too hot or cold. Rainforests are very important to life on Earth. They can remove some greenhouse gases from the air. This means they help to prevent climate change. The forests also provide us with air, water, food, and some medicines. The trees take in large amounts of CO<sub>2</sub> and create some of the oxygen we need to breathe. Finally, people are starting to cut down fewer trees compared to how many they did in the past. After watching the documentary, I'm the happiest I have ever been about the issue. Things are changing, and now, I have hope! Companies are going paperless and recycling old products. We mustn't stop here. We must continue to protect our planet.

Read the text and answer the questions.

1. The author loved Cut Them Down! because she \_\_\_\_\_.

- A. prefers documentaries to reading
- B. was advised to watch it
- C. thought it shared lots of important knowledge

2. The largest rainforest is as big as \_\_\_\_\_.

- A. The USA
- B. Central Asia
