ABSTRACT

These instructions provide you with a guide to preparing papers for CELRINA. Use this document as a template if you are using Microsoft Word 2013 or later (DOCX format). Otherwise, use this document as a set of instructions. The title of the paper should be written in upper-, and lower-case letters, not all capital letters. Avoid writing long formulas with subscripts in the title; short formulas that identify the elements are fine (for example, "Nd–Fe–B"). Don't write "(Invited)" in the title. The author's full name takes precedence in the author column, but is not required. Leave a space between the author's initials. The abstract should be a brief but comprehensive reflection of what is in your article. In particular, the abstract must be complete, without abbreviations, footnotes, or references. Abstracts should be between 150–250 words. Make sure you adhere to these restrictions, otherwise you will need to edit the abstract as needed. The abstract must be written in one paragraph, and must not contain mathematical equations or tabular material displayed. The abstract should include three or four different keywords or phrases, as this will help readers find it. It is important to avoid excessive repetition of phrases as this can result in the page being rejected by search engines. Make sure your abstract reads well and is grammatically correct. Use an appropriate font (Century Gothic, size 10)

Key Word: *contains keywords or words that often appear in the abstract, provide 3-6 keywords*

I.INTRODUCTION (14pt)

The introductory section contains an explanation of the problems, challenges, or needs of the community (partners) which are the background or inspiration for implementing community service activities, the objectives of community service activities, and the results of the literature review. The entire introductory section is presented in an integrated manner in the form of paragraphs with a length of 10-15% of the total length of the article. [Century Gothic, 10]. The reference method uses numbers in brackets [1], [2], [3], [4] and so on using IEEE Mendeley format software. The problem must offer new research benefits as an innovative effort.

1. Writing Instructions (12pt)

To write articles

Please follow these guidelines to write articles:

1. First level titles (e.g., Introduction, Conclusion, etc.) must be printed in bold, in all capital letters, centered, size 14 and numbered in Roman numerals.

2. Second level titles, for example, if there are additional points in a particular chapter, you must use regular numbering numbers 1, 2, 3 etc., bold print, capital letters at the beginning of the word, italics, left alignment and size 12 pt.

3. This journal requires a minimum of 9 pages.

4. Use Century Gothic font

II.METHODOLOGY (14 pt)

This implementation method section contains an explanation of the stages or steps in describing the solutions offered to overcome community (partner) problems. This section can include research, tools, or objects as well as other supports to provide a clearer and more concise picture. The writing is in paragraph form with a length of 15-20% of the total length of the article, so for this methodology the minimum is 1 full page. [Century Gothic,10].

1. Supporting Planning

This section (as a writing example) contains additional explanations to be more detailed. If it necessary, author can include planning of a tool/activity/action which can also include pictures as support.

2. Flow diagram

For example, if there are additions, they can be deleted if they are not needed

III.RESULT & DISCUSION (14 pt)

The results and discussion section contains a presentation of the results of the activity and analysis related to the objectives of the activity. Each activity result must be discussed. The discussion contains the meaning of the results and comparing them with theory and/or results/research results of other similar and relevant activities. The length of the presentation of results and discussion is 40-60% of the total length of the article. The results of community service can be accompanied by tables, graphs (pictures) and/or charts if necessary, and deleted if not necessary. [Century Gothic, 10]

1.Result

This section can be used to be more detailed in each discussion of the results if in chapter III you want to list the results of the discussion in general

2.Discussion

This section can be used to be more detailed than each discussion presentation if in chapter III you want to include the general results of the discussion
*(for example)*

Figure 1.(This section contains the names/descriptions of the included images) This section can be filled with a brief explanation of the included images so that the information presented is clear, tailored to the explanation needs.

Table 1.(This section contains the names/descriptions of the tables listed)

No	Model	Amplitude	Rise Time	Overshoot

1	LQR withou t Noise	0,99	1.109 s	0,505%
2	LQR with Noise	0,67	52,720 s	102,942%

IV.CONCLUSION (14 pt)

Contains brief and sufficient answers to the problem of the research objectives, and is a logical and honest conclusion from the author based on what was obtained as well as operational implications or suggestions with reference to research findings. Conclusions are written narratively, using something other than bullet format and numbering.

V.REFERENCE (14 pt)

1.Acknowledgement

2.Reference

The reference list contains a minimum of 10 references published in the previous 5-10 years originating from primary data (sources of research articles in scientific journals) and other data sources (research/community service reports, news in newspapers, etc.) are arranged alphabetically. [Century Gothic, 10].
