

## Enceladus – Another Ocean World

Did you know there are many remarkable ocean worlds in our solar system to be explored? 🌊

Meet one of Saturn's moons, Enceladus, a small, icy world that has geyser-like jets spewing water vapor and ice particles into space and a white surface that reflects nearly 100 percent of the light that strikes it. These conditions result in the formation of Saturn's magnificent E ring. 🪐
