

🎥 Tips for Recording & Virtual Connection 🎥

Quiet and bright room

Use external microphone

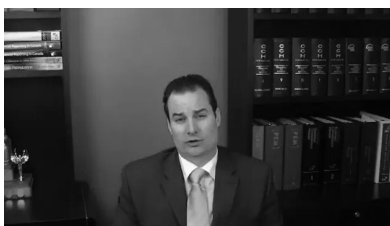

Sit straight & remember the Rule of Thirds

Here is a bit of advice before you start:

Make sure you use **Google Chrome** for SlidesLive recorder or Vmix call.

- ✓ Record in a **bright and quiet space** (no open space nor coffee shop).
- ✓☀️ Record **during the day** when the sun is up and shining.
- ✗🌙 Recording in the night (*and the night before the deadline ;)* is not going to look good as there will be not enough light for your web camera! Plan your recording in advance, test the recorder and come back to SlidesLive Support Team with questions.
- ✓💡 Have a **clean background**, use as much light as possible (window light is perfect, let some sunshine in). A desk lamp right next to you will make the picture look less grainy. More light the better! 💡
- ✓🎧 **Microphone** - if you have an external mic, great! If not, basic headphones have an in-built one ([example here](#)). Do not touch the microphone while speaking & ✗ avoid having noisy accessories (bracelets, dangling earrings).
If you use the internal mic from your laptop, make sure you are close enough, great audio is a goal too.
- ✓🎥 **Camera** - either an internal webcam or external web/camera. Try not to move your laptop during your talk, it can cause shaking.
- ✓💻 **Composition** - Sit straight and remember the Rule of Thirds, in the middle is fine too!
Have your whole head in the shot, it looks much more professional. ✗ Try not to cut off your head.
- ✓🗨️ **Presentation/Demo** - always put to fullscreen, hide your mouse cursor and the “sharing screen” bar that shows at the bottom.
- ✓👋😊 Don't forget to introduce yourself and smile! Make a good impression on the viewers. 🔥👤

There should be just a little bit of space above your head = headroom

✗ This speaker has a lot of headroom.

headroom

✓ This is a perfect headroom! 🔥
