Bitcoin Price Prediction: Will BTC Remain Above $100k amidst JetBolt's Astounding Presale

Key Highlights

- Bitcoin remains above $100,000, but retail activity lags as institutional accumulation dominates 2025 BTC price prediction trends.
- Bitcoin price predictions range from $125,000 to $150,000 for this cycle, with some analysts eyeing $200,000 if momentum continues.
- JetBolt has sold over 353 million tokens during its [fast growing presale](), backed by a zero-gas ecosystem.
- JetBolt's instant custody and socially connected staking access allow users to engage with several platform features immediately, a rarity for newer cryptocurrencies.

With Bitcoin holding strong above $100,000 and JetBolt pushing past 353 million tokens sold, two different crypto stories are unfolding—one driven by institutional dominance, the other by early-stage utility.

Curious what makes Bitcoin and JetBolt some of the best crypto coins this quarter? Read further and discover what's fueling both tokens.

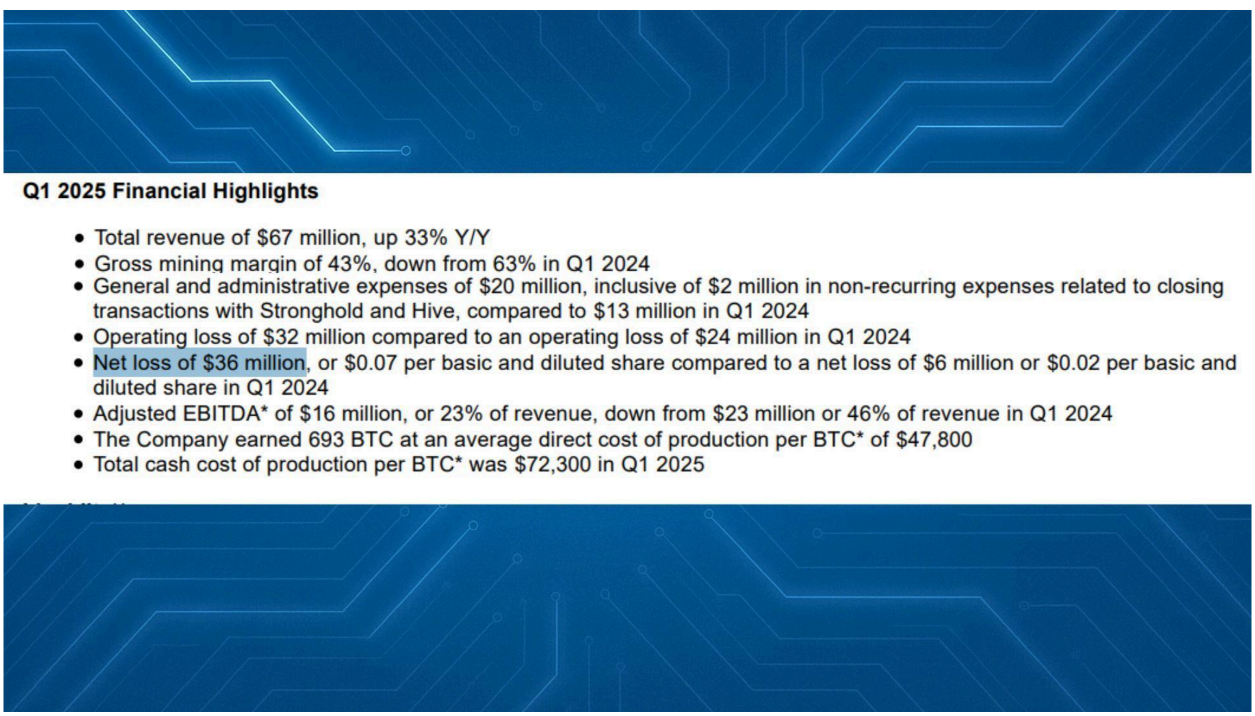
BTC Miners Recalibrate Their Strategy to the AI Sector Post-Bitcoin Halving

As Bitcoin continues to hover around $103,000, the conversation is no longer just about price forecasts—it's about staying power. The key question on many minds now is: Will BTC remain above $100k as miners face shrinking returns?

Bitfarms' latest earnings report shows how the economics are changing fast. In Q1 2025, the company reported a $36 million net loss—a sharp jump from the $6 million loss in the same quarter last year— despite revenue rising 33% year-over-year.



Q1 2025 Financial Highlights

- Total revenue of $67 million, up 33% Y/Y
- Gross mining margin of 43%, down from 63% in Q1 2024
- General and administrative expenses of $20 million, inclusive of $2 million in non-recurring expenses related to closing transactions with Stronghold and Hive, compared to $13 million in Q1 2024
- Operating loss of $32 million compared to an operating loss of $24 million in Q1 2024
- Net loss of $36 million, or $0.07 per basic and diluted share compared to a net loss of $6 million or $0.02 per basic and diluted share in Q1 2024
- Adjusted EBITDA* of $16 million, or 23% of revenue, down from $23 million or 46% of revenue in Q1 2024
- The Company earned 693 BTC at an average direct cost of production per BTC* of $47,800
- Total cash cost of production per BTC* was $72,300 in Q1 2025

Bitfarm's Q1 2025 Financial Highlights

Behind the red ink is a tightening squeeze: Bitcoin's April halving cut mining rewards in half, just as price swings tested margins. With profitability dropping—gross margins falling from 63% to 43%—Bitfarms has pivoted. It's now betting on artificial intelligence (AI).

The mining company secured $300 million in credit to scale a new data center in Pennsylvania dedicated to high-performance computing (HPC). According to Coin Metrics, more mining firms, such as Core Scientific, are retooling their infrastructure for AI workloads, using the same energy-intensive hardware originally designed for proof-of-work crypto.

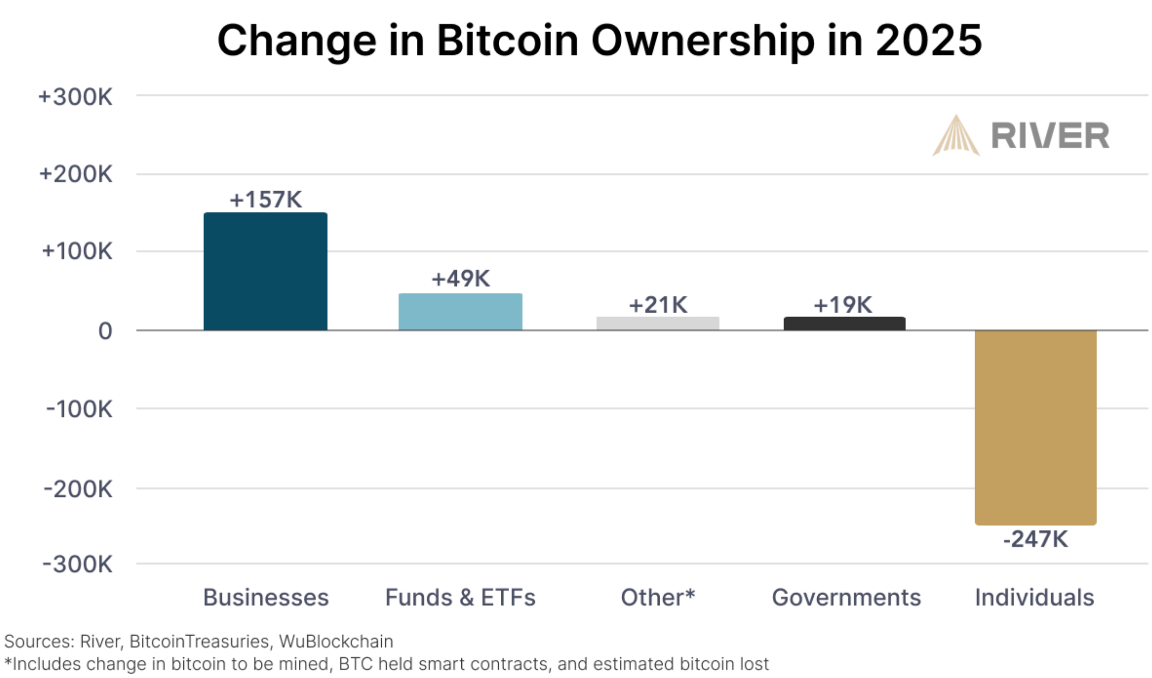
BTC Price Prediction: Institutions Step In While Bitcoin Retail Interest Cools Off

Bitcoin's return to six-figure territory sparked renewed optimism, but retail investors seem to be sitting this phase out. According to app data and search trends, casual interest in cryptocurrencies is well below prior peaks.

Google searches for "Bitcoin" are at a six-month low, and Coinbase has slipped to the 15th spot in the U.S. Finance app rankings—down significantly from when Bitcoin last broke its all-time high in late 2024. These shifts are having an impact on Bitcoin's price forecast trends.



River Financial's Change in Bitcoin Ownership 2025 Chart

Meanwhile, institutional players are moving in. A recent chart from River Financial shows that individual investors offloaded nearly 250,000 BTC this year, while businesses acquired over 150,000 coins—more than three-quarters of which were led by MicroStrategy alone.

The divergence highlights a familiar pattern: retail investors often follow, not lead, the cycle. If historical behavior holds, a retail surge might follow once Bitcoin crosses the $109,000 threshold again.

According to several market watchers, the latest Bitcoin price predictions place the cycle top between $125,000 and $150,000—with outliers suggesting a possible move toward $200,000. Historical patterns suggest that if Bitcoin's price continues to rise, retail attention could follow.

Over 353 Million Tokens Sold: JetBolt's Outstanding Presale Silences Naysayers

According to the official presale tracker, JetBolt (JBOLT) has crossed the 353 million token mark in its presale, firmly establishing itself as one of the hottest trending crypto coins of the year. This milestone suggests growing demand from crypto users looking for immediate blockchain utility—something many presale-stage projects still lack.

Much of JetBolt's momentum stems from its ready-to-use features. JBOLT tokens come with instant custody, allowing immediate access to the ecosystem's core features, such as SocialFi staking and the AI-powered crypto news feed.

Its immediate utility and zero-gas tech have helped convert skeptics into early buyers, positioning JetBolt as one of the best crypto presales this quarter.

From Utility to Rewards: Why JetBolt's Presale Keeps Gaining Traction

As JetBolt's presale surpassed 353 million tokens sold, some early buyers have started sharing their experiences across social channels, highlighting features like instant token access and socially connected staking as early standouts.

While overall community size is still rising, mentions on platforms like X suggest a growing interest in JetBolt's live tools compared with more traditional presale models.

JetBolt's exclusive Alpha Boxes

JetBolt's [Alpha Box bundles]—offering up to 25% extra tokens for batch purchases—remain a central feature drawing in crows as its daily price increases during the presale.

With its platform has features ready from day one, the emerging crypto coin is a welcome change from typical wait-and-see presale experiences.

Final Thoughts

Bitcoin holding above $100,000 remains a key driver, whether the market is entering a bull run or facing a correction. Bullish analysts' Bitcoin price predictions now point to potential highs between $125,000 and $150,000—underscoring the scale of expectations this cycle. However, unpredictable macro-economic shifts could alter these at any time.

On a different front, JetBolt continues to gain ground by offering immediate, tangible utility. With over 353 million tokens sold, it's attracting early buyers and crypto whales seeking new altcoins.

In a market shaped by both momentum and function, Bitcoin and JetBolt are emerging as two of the hottest crypto coins this quarter.
