DroidBridge Privacy Policy

Effective Date: May 1, 2026
Developer: DNA Mobile Applications
App Name: DroidBridge / JavaLauncher

Privacy-first summary: DroidBridge does not operate a DNA Mobile Applications user-account server, does not sell user data, does not use advertising SDKs, and does not automatically upload Microsoft login tokens, Minecraft profile data, logs, worlds, mods, or launcher files to DNA Mobile Applications. Microsoft login is handled through Microsoft services, and launcher session data is stored locally on your device for launcher functionality.

DNA Mobile Applications respects your privacy. This Privacy Policy explains what information DroidBridge collects, does not collect, stores locally, and may access while providing launcher features for Minecraft: Java Edition on Android.

DroidBridge is an independent launcher project. DroidBridge is not affiliated with, endorsed by, sponsored by, or approved by Microsoft, Mojang, Xbox, or Minecraft. Minecraft, Microsoft, Xbox, and related names, services, and assets belong to their respective owners.

Some launcher backend and compatibility code is credited to the Boardwalk project. Boardwalk is credited for technical contributions and historical launcher-related work; Boardwalk does not operate DroidBridge, control DroidBridge, or receive user data from DroidBridge.

1. Summary

- DroidBridge does not collect personal data into a DNA Mobile Applications database.
- DroidBridge does not operate a user-account server.
- DroidBridge does not sell user data.
- DroidBridge does not use advertising SDKs.
- DroidBridge does not use analytics SDKs unless explicitly added in a future version and disclosed in this policy.
- Microsoft account login is handled through Microsoft authentication services. DroidBridge receives authentication tokens only so the app can verify Minecraft access, retrieve your Minecraft profile, and allow you to launch the game. These tokens are stored locally on your device and are not uploaded to DNA Mobile Applications.

2. Information Stored Locally on Your Device

DroidBridge may store the following information locally on your Android device:

- Microsoft/Minecraft login session data, such as access tokens or refresh tokens, after you sign in.
- Your Minecraft profile information, such as username, UUID, and skin URL.
- Launcher settings, such as selected renderer, memory allocation, controls, storage path, and instance preferences.
- Installed instance metadata, such as instance name, Minecraft version, loader type, icon path, and modpack metadata.
- Offline profile information, if you create offline profiles after completing Microsoft login.
- Local logs generated by the launcher or game.
- Local cache files used for images, skins, icons, modpack metadata, or launcher performance.

This information is stored on your device so the launcher can function. DNA Mobile Applications does not receive this information automatically.

You can remove locally stored information by signing out, clearing app data, uninstalling the app, or deleting launcher files from your selected storage location.

3. Microsoft Account Login

When you sign in with a Microsoft account, DroidBridge opens Microsoft's login system and uses Microsoft authentication to complete sign-in.

DroidBridge may use Microsoft-provided tokens to authenticate your Microsoft account, authenticate with Xbox Live services, authenticate with Minecraft services, verify that the account can access Minecraft: Java Edition, retrieve your Minecraft profile, username, UUID, and skin information, and refresh your login session so you do not need to sign in every time.

DroidBridge does not receive or store your Microsoft password. Your password is entered only into Microsoft's sign-in page.

DroidBridge does not send your Microsoft login tokens to DNA Mobile Applications servers. The tokens are stored locally on your device for launcher functionality.

If you sign out, DroidBridge attempts to remove locally stored Microsoft account session data and clear local WebView login state used by the launcher.

4. Minecraft Services

DroidBridge connects directly to Minecraft and Microsoft services when needed for authentication, profile loading, ownership checks, and launching the game.

Minecraft use is subject to the official Minecraft End User License Agreement and usage rules. You can review them here:

Minecraft EULA: https://www.minecraft.net/en-us/eula

Minecraft Usage Guidelines: https://www.minecraft.net/en-us/usage-guidelines

5. Third-Party Content Services

DroidBridge may allow you to browse, download, install, update, or manage mods, modpacks, resource packs, shader packs, or other content from third-party services.

Depending on the feature used, DroidBridge may connect directly to services such as Modrinth, CurseForge, GitHub, Minecraft/Microsoft services, and other content providers selected by the user or required by installed content.

When DroidBridge contacts a third-party service, that service may receive standard network information such as your IP address, device request information, and the content requested. DNA Mobile Applications does not control the privacy practices of third-party services.

You should review the privacy policies and terms of any third-party service you use.

6. Files and Storage Access

DroidBridge needs file access to install, launch, and manage Minecraft files on your device.

Depending on your Android version and selected settings, DroidBridge may access the launcher game directory, Minecraft versions, instances, mods, resource packs, shader packs, saves/worlds, screenshots, logs, crash reports, imported modpacks, and exported modpacks.

If you grant access to a custom storage folder, DroidBridge uses that folder to read and write launcher files. DNA Mobile Applications does not automatically upload these files.

7. Logs and Crash Information

DroidBridge may create local logs to help diagnose launcher or game problems.

These logs remain on your device unless you choose to share them.

If you use a “Share Log” or similar feature, you decide where the log is sent. Logs may contain technical information such as device details, launcher settings, selected renderer, file paths, installed versions, mod names, or crash messages. You should review logs before sharing them publicly.

DNA Mobile Applications does not automatically collect crash logs or launcher logs unless a future version clearly adds such a feature and this policy is updated.

8. Clipboard Access

DroidBridge may include clipboard bridge features for compatibility with the game or native runtime components.

Clipboard access is used only for launcher/game functionality, such as copying or pasting text between Android and the game environment. Clipboard contents are not sent to DNA Mobile Applications.

9. Notifications

DroidBridge may request notification permission for features such as foreground installation progress or background installation status.

Notifications are used to keep you informed about launcher activity. Notification permission does not give DNA Mobile Applications access to your private data.

10. Children’s Privacy

DroidBridge is intended for users who are allowed to use Minecraft and Microsoft account services under the terms that apply to them.

DroidBridge does not knowingly collect children’s personal information into a DNA Mobile Applications database. Since Microsoft account login is handled by Microsoft, parental controls, age requirements, and account permissions are managed through Microsoft and Minecraft services.

Parents or guardians should review Minecraft, Microsoft, and platform rules before allowing a child to use the launcher.

11. Data Sharing

DNA Mobile Applications does not sell, rent, or trade personal data.

DNA Mobile Applications does not operate a backend database that stores Microsoft login details, Minecraft profile data, launcher accounts, or gameplay files.

Data may be sent directly from your device to third-party services only when needed for features you use, such as Microsoft login, Minecraft authentication, mod browsing, mod downloading, update checks, or opening external links.

12. Data Retention

Because DroidBridge does not collect user data into a DNA Mobile Applications database, DNA Mobile Applications does not retain your personal data on its servers.

Data stored locally on your device remains there until you sign out, delete an account/profile from the launcher, clear app data, uninstall the app, delete launcher files manually, or Android removes cached data.

Some third-party services may retain information according to their own privacy policies.

13. Security

DroidBridge is designed to keep authentication data on your device and avoid unnecessary data collection.

However, no app or device storage method is perfectly secure. You should protect your device with a screen lock, keep Android updated, and avoid sharing logs or files that may contain private information.

Do not share Microsoft access tokens, refresh tokens, launcher account files, or logs that contain sensitive information.

14. Your Choices

You can control your data by signing out of Microsoft in the launcher, clearing launcher app data in Android settings, deleting launcher folders or selected storage folders, removing offline profiles, revoking app permissions in Android settings, reviewing logs before sharing them, and choosing not to use third-party content browsing or downloading features.

15. External Links

DroidBridge may contain links to external websites, including Microsoft, Minecraft, Modrinth, CurseForge, GitHub, or other services.

DNA Mobile Applications is not responsible for the content, privacy policies, or practices of external websites or third-party services.

16. Changes to This Policy

DNA Mobile Applications may update this Privacy Policy when DroidBridge changes, when new features are added, or when legal, platform, or service requirements change.

If the app begins collecting additional data, using analytics, using crash-reporting services, using ads, or operating a backend service, this Privacy Policy should be updated before or when those features are released.

17. Contact
