

## **Creative Original Video**

For this assignment, you will want to capture the video using a different method than the traditional approach, which might involve using your phone or video camera. You can certainly use those, but they should not be the only methods of capturing the video. Some alternate ways of capturing the video could include, but are not limited to, using a drone, GoPro, 360-degree cameras, multi-cameras, etc.

**Keep in mind what we did this semester and consider integrating and using some of the different techniques and assignments that we did.**

Once you capture the footage, you will then edit it. Some editing techniques that you might consider include slow motion, time-lapse, 360-degree video, etc.

There isn't a specific time requirement for this assignment, but make sure it is worthy of a culminating activity for this class and 200 points. You will want to include the following on your page:

Time you spent on the different parts of the assignment.

Techniques used for the video.

Embed the finished video.

You can work independently or in groups up to 3 members

Some fun YouTube videos to consider:

Phone tips and tricks

360-degree Android phone videos

Time-lapse videos, including an instructor's short time-lapse
