

STARS Automation Information

Criteria for STARS automation to work properly:

- Students are enrolled and currently active in your school in the STARS suite.
- Students and teachers have been programmed for courses/subjects in the STARS suite.
 - For guidance on programming in STARS, consult the STARS wiki, contact your Academic Policy and Systems Lead, or refer to 2022-2023 Programming and Grading Guide
here: <https://infohub.nyced.org/docs/default-source/doe-employees-only/academic-policy-programmingguide.pdf> Note: pg 21-22 refers to ensuring your roster data is available in LMS.
- All course sections you expect to see have at least one real meet time (i.e., that the course meets at least one day per week on a student's schedule).
- All course sections and classes have DOE teachers assigned (and not just nicknames).
 - In STARS Classroom, to assign subjects and/or push-in and pull-out records to teachers not currently appearing on the Teacher Course History page, you may either add the teacher to your Galaxy PNOB or use the "Additional Staff" feature to associate the teacher before programming students.
 - In STARS Admin, use the Teacher Reference screen in STARS Admin to match the name to Galaxy.
- All course sections, ISP and PIPO records, and course subjects have the iLearn property indicated with the check box selected.

STARS Refresh Times- iLearn Align will sync 4 times daily:

9:00AM Changes made before 9:00AM will be reflected in iLearn by 10:00AM	11:00AM Changes made before 11:00AM will be reflected in iLearn by 12:00PM	2:00PM Changes made before 2:00PM will be reflected in iLearn by 3:00PM	Overnight

Computer Science Education

Subject includes a meaningful lesson/unit of computer science education

A meaningful CS unit: 1) engages students in creative computing activities, labs, or projects that connect to students' interests, 2) assesses students process creating artifacts and their ability to create artifacts that meet specific requirements, and 3) assesses student outcomes including a grade-level aligned CS Perspective (explorer, creator, innovator, and citizen), all three CS Practices (analyzing, prototyping, and communicating), and at least three CS Concepts (abstraction, algorithms, programming, data, and networks).

Computer Science Topic(s)

Enter the computer science related topic(s) taught in this course. Separate topics with a semi-colon.
