1. Download the [Instant Data Scraper](#) extension for Chrome

2. Search for the location and the service on Google Maps

3. Load all of the businesses until you reach the end of the list in Google Maps

And it should automatically highlight the list in red, which means that it will scrape that part of the website, and that is

what we want:

In case it does not highlight the list right away and it highlights something else, just keep clicking “Try another table” until you get the right one:

Beware: In case you get errors for the phone numbers column, proceed with the steps, if not, you are set and can hop on to the last step.

Note: change the names of each field.

7. Once you have pasted the table into the Google Sheet, I want you to click on the CSV button in the Instant Scraper and then open the file that you have downloaded:

8. After you open it, you will get all of the necessary info laid out properly, even the phone numbers, but if you want it in a Google Sheet then proceed:

9. Now, you have to add “spacing” to all of the fields where there are missing phone numbers, for instance:

PM	+1 817-487-1713	
	+1 469-309-6634	
	+1 817-310-9077	http
urs	spacing	http
	+1 888-809-9976	http
PM	+1 469-902-6007	
	+1 817-741-0885	http

10. Now you will be copying all of the phone numbers for that file you have opened and pasting them into ChatGPT after the following prompt **“Add a single quote at the beginning of all of these phone numbers and keep the same order and if there is “spacing” between some, keep that, too because I will be copying it to an excel sheet”**:

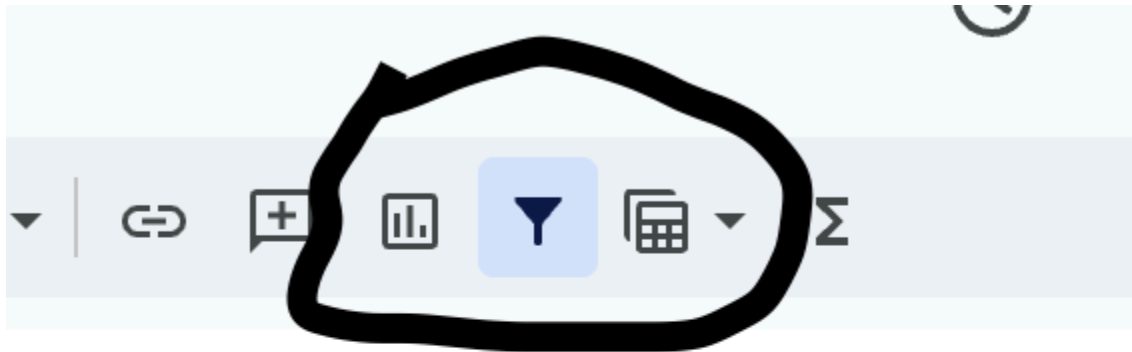

add a single quote at the beginning of all of these numbers and keep the same order and if there is spacing between some, then keep that, too because I will be copying it to an excel sheet

+1 704-999-6034  
+1 704-396-8383  
+1 704-937-7663  
+1 704-729-4898  
+1 252-298-9752

11. You will now get the desired list from ChatGPT that you will be copying into the phone number column in the Google Sheet you have created:
