Sequencer Copilot: privacy statement

Sequencer Copilot is a Chrome extension made by Vinay for engineers using the 75F Site Sequencer.

What it reads. Only pages on 75f.io, and only the Site Sequencer canvas: the blocks of the open sequence and the blocks offered in the palette. It reads them when you ask it to export the sequence, preview or apply a change, or draw a logic map.

What it keeps. Your settings (which AI assistant you use, display options) and any lessons collected from assistant replies, in your browser's local extension storage on this computer. A logic map snapshot is kept in the browser's session storage until the browser closes. You can clear lessons from Settings, and removing the extension deletes everything it stored.

What it sends. Nothing. The extension makes no network requests to any server, including its author's. It has no analytics or tracking. Text reaches your AI assistant only when you copy or download it and paste or upload it yourself.

Third-party code. The Mermaid diagram library (MIT licence) is bundled inside the extension and runs locally.

Contact. Questions about this extension: contact Vinay.
