

Therapeutic Procedures Vocabulary:

Define the following terms. You'll be using them for the next activity, so make sure your answers are good

1. Defibrillation (defib):
2. CPR:
3. Electrocardiography (EKG):
4. Epinephrine (Epi):
5. Bicarb: Baking Soda.
 - a. Is Bicarb still used as a medical treatment?
6. Extubated:
 - a. Why would a patient be extubated? Give at least two scenarios.
7. Cardioversion:

Therapeutic Procedures in Action:

Read the following questions, then answer them while watching the video linked below. The vocab you did above all applies to the video, so keep it in mind.

1. Assess and describe patient #1:
 - a. male/female?
 - b. history:
 - c. treatment prior to arriving at hospital
2. Assess and describe patient #2:
 - a. male/female?
 - b. history:
 - c. treatment prior to arriving at hospital
3. Blood pressure is 121 over 80, and heartbeat is 87bpm. Is this normal or abnormal?
4. What's happening to patient #2 and minute 6:30?
5. At minute 7:52, why would the doctor prepare "epi"?
6. What procedure is being performed at minute 8:00?
7. What is shown between minute 10:00-10:08?
8. What were the outcomes for the two patients?
9. What does "full neurological recovery" mean?
