Firebase workshop

Installing instruction

Workshop essentials:
- Python 3.4 - 3.6
- Python libraries:
    - requests
    - python-firebase

If you have any questions, please ask in the telegram group.

Installing Python

Attention: Python 3.7.x will not work with firebase library

<u>If you don't have python</u> -> install 3.6 version:
- [Linux](#)
- [macOS](#)
- [Windows](#)

<u>If you have python on your machine</u> -> check python version with command in terminal
`$ python --version`

If you see version 2.x.x -> try this command
`$python3 --version`

If you don't see required python version -> go to the previous step

Installing libraries

In case you have python version 2.x.x, replace pip with pip3.

Run next commands in your terminal:
`$ pip install requests`
`$ pip install python-firebase`
