

EXERCISE 10.1

PAGE: 196

1. Draw a line, say AB, take a point C outside it. Through C, draw a line parallel to AB using ruler and compasses only.

Solution:-

Steps for construction,

1. Draw a line AB.
 2. Take any point Q on AB and a point P outside AB and join PQ.
 3. With Q as center and any radius draw an arc to cut AB at E and PQ at F.
 4. With P as center and same radius draw an arc IJ to cut PQ at G.
 5. Place the pointed tip of the compass at E and adjust the opening so that the pencil tip is at F.
 6. With the same opening as in step 5 and with G as center, draw an arc cutting the arc IJ at H.
 7. Now, join PH to draw a line CD.
2. Draw a line L. Draw a perpendicular to L at any point on L. On this perpendicular choose a point X, 4 cm away from I. Through X, draw a line m parallel to L. Solution:-

A BEST PLACE TO LEARN

Steps for construction,

1. Draw a line L.
2. Take any point P on line L.
3. At point P, draw a perpendicular line N.
4. Place the pointed tip of the compass at P and adjust the compass up to length of 4 cm, draw an arc to cut this perpendicular at point X.
5. At point X, again draw a perpendicular line M.

3. Let L be a line and P be a point not on L. Through P, draw a line m parallel to L. Now join P to any point Q on L. Choose any other point R on m. Through R, draw a line parallel to PQ. Let this meet L at S. What shape do the two sets of parallel lines enclose?

Solution:-

Steps for construction,

1. Draw a line L.
2. Take any point Q on L and a point P outside L and join PQ.

3. Make sure that angles at point P and point Q are equal i.e. $\angle Q = \angle P$
4. At point P extend line to get line M which is parallel L.
5. Then take any point R on line M.
6. At point R draw angle such that $\angle P = \angle R$
7. At point R extend line which intersects line L at S and draw a line RS.

EXERCISE 10.2

PAGE: 199

1. Construct $\triangle XYZ$ in which $XY = 4.5$ cm, $YZ = 5$ cm and $ZX = 6$ cm
Solution:-

Steps of construction:

1. Draw a line segment $YZ = 5$ cm.
2. With Z as a center and radius 6 cm, draw an arc.
3. With Y as a center and radius 4.5 cm, draw another arc, cutting the previous arc at X.
4. Join XY and XZ.

Then, $\triangle XYZ$ is the required triangle.

2. Construct an equilateral triangle of side 5.5 cm.

Solution:-

Steps of construction:

1. Draw a line segment $AB = 5.5$ cm.
2. With A as a center and radius 5.5 cm, draw an arc.
3. With B as a center and radius 5.5 cm, draw another arc, cutting the previous arc at C.
4. Join CA and CB.

Then, $\triangle ABC$ is the required equilateral triangle.

3. Draw $\triangle PQR$ with $PQ = 4$ cm, $QR = 3.5$ cm and $PR = 4$ cm. What type of triangle is this?

Solution:-

Steps of construction:

1. Draw a line segment $QR = 3.5$ cm.
2. With Q as a center and radius 4 cm, draw an arc.
3. With R as a center and radius 4 cm, draw another arc, cutting the previous arc at P.
4. Join PQ and PR.

Then, $\triangle PQR$ is the required isosceles triangle.

4. Construct $\triangle ABC$ such that $AB = 2.5$ cm, $BC = 6$ cm and $AC = 6.5$ cm. Measure $\angle B$. Solution:-

A BEST PLACE TO LEARN

1. Draw a line segment $BC = 6$ cm.
2. With B as a center and radius 2.5 cm, draw an arc.
3. With C as a center and radius 6.5 cm, draw another arc, cutting the previous arc at A.
4. Join AB and AC.
Then, $\triangle ABC$ is the required triangle.
5. When we will measure the angle B of triangle by protractor, then angle is equal to $\angle B = 80^\circ$

EXERCISE 10.3

PAGE: 200

1. Construct $\triangle DEF$ such that $DE = 5$ cm, $DF = 3$ cm and $m\angle EDF = 90^\circ$. Solution:-

Steps of construction:

1. Draw a line segment $DF = 3$ cm.
2. At point D, draw a ray DX to making an angle of 90° i.e. $\angle XDF = 90^\circ$.
3. Along DX, set off $DE = 5$ cm.
4. Join EF.

Then, $\triangle EDF$ is the required right angled triangle.

2. Construct an isosceles triangle in which the lengths of each of its equal sides is 6.5 cm and the angle between them is 110° .

Solution:-

A BEST PLACE TO LEARN

Steps of construction:

1. Draw a line segment $AB = 6.5$ cm.
2. At point A, draw a ray AX to making an angle of 110° i.e. $\angle XAB = 110^\circ$.
3. Along AX, set off $AC = 6.5$ cm.
4. Join CB.

Then, $\triangle ABC$ is the required isosceles triangle.

3. Construct $\triangle ABC$ with $BC = 7.5$ cm, $AC = 5$ cm and $m\angle C = 60^\circ$. Solution:-

Steps of construction:

1. Draw a line segment $BC = 7.5$ cm.
2. At point C, draw a ray CX to making an angle of 60° i.e. $\angle XCB = 60^\circ$.
3. Along CX, set off $AC = 5$ cm.
4. Join AB.

Then, $\triangle ABC$ is the required triangle.

EXERCISE 10.4

PAGE: 202

1. Construct $\triangle ABC$, given $m \angle A = 60^\circ$, $m \angle B = 30^\circ$ and $AB = 5.8$ cm. Solution:-

Steps of construction:

1. Draw a line segment $AB = 5.8$ cm.
2. At point A, draw a ray P to making an angle of 60° i.e. $\angle PAB = 60^\circ$.
3. At point B, draw a ray Q to making an angle of 30° i.e. $\angle QBA = 30^\circ$.
4. Now the two rays AP and BQ intersect at the point C. Then, $\triangle ABC$ is the required triangle.

2. Construct $\triangle PQR$ if $PQ = 5$ cm, $m \angle PQR = 105^\circ$ and $m \angle QRP = 40^\circ$. (Hint: Recall angle-sum property of a triangle).

Solution:-

A BEST PLACE TO LEARN

We know that the sum of the angles of a triangle is 180° .

$$\begin{aligned}\therefore \angle PQR + \angle QRP + \angle RPQ &= 180^\circ \\ &= 105^\circ + 40^\circ + \angle RPQ = 180^\circ \\ &= 145^\circ + \angle RPQ = 180^\circ \\ &= \angle RPQ = 180^\circ - 145^\circ \\ &= \angle RPQ = 35^\circ\end{aligned}$$

Hence, the measures of $\angle RPQ$ is 35° .

Steps of construction:

1. Draw a line segment $PQ = 5$ cm.
2. At point P, draw a ray L to making an angle of 105° i.e. $\angle LPQ = 105^\circ$.
3. At point Q, draw a ray M to making an angle of 40° i.e. $\angle MQP = 40^\circ$.
4. Now the two rays PL and QM intersect at the point R. Then, $\triangle PQR$ is the required triangle.

3. Examine whether you can construct $\triangle DEF$ such that $EF = 7.2$ cm, $m\angle E = 110^\circ$ and $m\angle F = 80^\circ$. Justify your answer.

Solution:-

From the question it is given that,

$$EF = 7.2 \text{ cm}$$

$$\angle E = 110^\circ$$

$$\angle F = 80^\circ$$

Now we have to check whether it is possible to construct $\triangle DEF$ from the given values. We know that the sum of the angles of a triangle is 180° .

Then,

$$\angle D + \angle E + \angle F = 180^\circ$$

$$\angle D + 110^\circ + 80^\circ = 180^\circ$$

$$\angle D + 190^\circ = 180^\circ$$

$$\angle D = 180^\circ - 190^\circ$$

$$\angle D = -10^\circ$$

We may observe that the sum of two angles is 190° is greater than 180° . So, it is not possible to construct a triangle.

EXERCISE 10.5

PAGE: 203

1. Construct the right angled ΔPQR , where $m\angle Q = 90^\circ$, $QR = 8\text{ cm}$ and $PR = 10\text{ cm}$.

Solution:-

Steps of construction:

1. Draw a line segment $QR = 8\text{ cm}$.
2. At point Q, draw a ray QY to making an angle of 90° i.e. $\angle YQR = 90^\circ$.
3. With R as a center and radius 10 cm , draw an arc that cuts the ray QY at P.
4. Join PR.

Then, ΔPQR is the required right angled triangle.

2. Construct a right-angled triangle whose hypotenuse is 6 cm long and one of the legs is 4 cm long

Solution:-

Let us consider ΔABC is a right angled triangle at $\angle B =$

90° Then,

AC is hypotenuse $= 6\text{ cm}$... [given in the question]

$BC = 4\text{ cm}$

Now, we have to construct the right angled triangle by the above values

A BEST PLACE TO LEARN

Steps of construction:

1. Draw a line segment $BC = 4 \text{ cm}$.
2. At point B, draw a ray BX to making an angle of 90° i.e. $\angle XBC = 90^\circ$.
3. With C as a center and radius 6 cm, draw an arc that cuts the ray BX at A.
4. Join AC.

Then, $\triangle ABC$ is the required right angled triangle.

3. Construct an isosceles right-angled triangle ABC, where $m\angle ACB = 90^\circ$ and $AC = 6 \text{ cm}$.

Solution:-

Steps of construction:

1. Draw a line segment $BC = 6 \text{ cm}$.
2. At point C, draw a ray CX to making an angle of 90° i.e. $\angle XCB = 90^\circ$.
3. With C as a center and radius 6 cm, draw an arc that cuts the ray CX at A.

4. Join AB.

Then, $\triangle ABC$ is the required right angled triangle.
