

To understand biological communities, it is important to know what a community is composed of. The definition of community is: "A community is a group of **organisms** comprising the **populations** of all the different **species** that **coexist** and interact with each other in the same **ecosystem** due to having overlapping **habitats** and **niches**." For each of the highlighted key terms, add the definition of the word to your [note blanks](#).
