

NAME OF PATHOGEN

Description of the pathogen (is it a virus or bacteria, where is it commonly found, who does it infect, what is its power - how likely is it to kill you **OR** to spread to other people)

OFFENSES

Attacks

Put the ways the pathogen attacks humans here. What part/cells of the human body does it attack?

Outcome

What is the name of the disease the pathogen causes? What symptoms does it cause?

Incubation

How long does it take for symptoms to show up?

Duration

How long does the infection last?

DEFENSES

Vaccine

If there is a vaccine, include information about the vaccine here. Who should get the vaccine and when? How effective is the vaccine?

Behavioral

Include information about how we can protect ourselves. Does hand washing help? What about having a healthy diet?

Treatment

How are infected people treated? Do they need medical attention?

R0

How contagious is the disease?

Current Status:

Are there active outbreaks occurring in the US or in other parts of the world? How many people are presumed infected? Perhaps the disease has been eradicated.
