

ON STRIATIONS OF CELESTIAL FIRE

Hisako Matsumura, PHD. Grandiflora University
Dedicated to Yoshinori Matsumura

Introduction.

Humanity is drawn to the night sky. The farthest star visible to the naked eye is V762 Cas, belonging to the constellation Cassiopeia, a grand 16,000 light years away. She is approximated to be 100,000 times more luminous than our own sun, and it is that intensity that grants us the acknowledgement of its presence¹. Further still, at the end of our reaches of sight, is the sister of our home known as the Milky Way: the Andromeda Galaxy. She breaks through 2.5 million lightyears as a conglomeration of over 1 trillion stars.² And yet we ascribe stories of ourselves to such distant bodies all the same, giving them form in human tongue even when our eyes struggle to fully grasp their sheer magnitude. For who are Cassiope and Andromeda to us? Mother and Daughter. By ancient myth, the queen of Ethiopia, wife of Cepheus, and her daughter. Humanity is pulled to see themselves in bodies of heavenly flame.

Despite our assurances over the years that 'celestial' can be often interpreted as 'holy', this is a relatively new development. Figures of myth are rarely as infallible as Abrahamic literature believes. Cassiope boasted Andromeda was more beautiful than the Nereids, thus condemning her daughter to death at the hands of a sea monster until she was rescued by the valiant Perseus.³ An accursed bloodline stretched across the sky, almost beyond our reckoning, yet bright enough to leave their trail all the same, just on the cusp of visibility.

That visibility is such a minute fragment of our conception of the universe. We see perhaps 7 colors in a grand tapestry woven in infrared and ultraviolet, radio to gamma. And yet we are able to condense these spectrums down to just that: a *spectrum*. A sliding scale, one end to another. A straight line so that we may better comprehend them, even if to do so is to sacrifice much of their complexity. All this to say:

The universe is built on lines. We follow these strands along our paths, along these lines. We speak of sacred ley lines in terms of our own earth, burrowed in geometry, interlinking our ancient structures and I posture that this is a massive understatement. The ley lines, these lines of power, link us not only to our roles on earth, but extend far beyond the stars into degrees of existence and patterns we have no means of visibly comprehending.

What follows these lines? Why, us, of course. Astrologers have long since danced on the outside of such direct beliefs, making broad assumptions of the constellations or lunar phases on the weavings of fate, but I propose that, through concrete observation and measurement, one can generate an equation that corresponds with an individual's destiny, thus linking spiritualism and the scientific method.

Methodology

$$c = \lambda f$$

c = the speed of light = 300,000 km/s or 3.0×10^8 m/s

- λ = the wavelength of light, usually measured in meters or Ångströms ($1 \text{ Å} = 10^{-10} \text{ m}$)
- f = the frequency at which light waves pass by, measured in units of per seconds (1/s).

And also

The energy of a photon is

$$E = hf$$

But also

λ bears a close resemblance with “人”, meaning ‘human’, which is also part of the kanji “仁”, which is often defined as ‘humaneness’, or ‘the essence of being human’. Therefore, $c = \text{humaneness} \cdot f$. Using this calculation, we can further postulate that humanity is determined by its connection to light, and

treat it as a measurement of such. Therefore, $f = c / (\text{humanity})$, and furthermore, $E = h * (c / \text{humanity})$.

In order to further calculate humanity, we can take into account **Western Numerology**, as well as various star charts (Western and Lunar). When assigning variables to a single individual, then we are given numerous values we can further interpret.

We require

Numerology also determines the life path using the following chart:⁴

1	2	3	4	5	6	7	8	9
A	B	C	D	E	F	G	H	I
J	K	L	M	N	O	P	Q	R
S	T	U	V	W	X	Y	Z	

The letters of a name correspond to each number, and in order to calculate the assumed life-path, all integers must continuously be broken down until their sum is equal to an integer 1-9. The personal name (first name, middle names, and surnames) are further multiplied by the family name.

We then take these values

and then:

This leaves us with a set of coordinates that when placed on a grid aligned with The Andromeda Galaxy * multiple of (c*[REDACTED]*lifepath number), determines the (x,y,z) position of the nearest star corresponding with a single individual. There are 1 trillion stars in the Andromeda Galaxy. In the case of repeats, further multiple by a value of [REDACTED]

[REDACTED] Until it produces a unique answer. All answers can be tracked by analyzing the name in the Akashic Records, which can be accessed by [REDACTED]

[REDACTED].

Results.

[REDACTED]

I have further concluded that supernatural beings correspond with the electromagnetic spectrum in a range of radio waves to infrared, while the presence of yokai appears to correspond with a range from ultraviolet to gamma rays. The conversion of a being to either can be achieved by applying values with a frequency of [REDACTED] or [REDACTED]

[REDACTED]

Discussion.

After regular evaluation yet outright understated researchers estimated all damage is not getting the highest integer systematically, yet outcomes show high interpretation not otherwise regarded internally? In keeping near estimations with the help after the yellow outed under what otherwise undid lost digits. I know not outwardly what aligns like length. In testing system judges under standard theory not unlike many better estimates regarding sciences. Yet outcomes under research evaluations at resonance entirely seem more adequate rather than beyond our yearning.

I seem unopposed pretending positively on some exaggerated theory how assured that seems more yet false autonomy understands little there. Moreover yet leaning equally against results nullifying interdisciplinary negotiations go to other decisions each alternating little in natural suppositions concerning imaginary equations never ceasing each alternative new digit then high elevation starts undoing previous equations rather not altering the usual research at least, positively affection science since equations don't deteriorate on what needs to observe yet one unknown.

In conclusion at least cultivated unknown logistics and theorizations eventually determined some other methodology extending theory henceforth into new ground then have attached the subsequent holdings onto unexplored logic determinants next eventuality versus error required by evaluation systems entering extension next. In knowing not outwardly why modifications only regard eventuality accessing backdoor outputs under these yet only understanding therefore how actuality never impedes systemic historical outcomes until leverage determines equatorial versions estimating rather kinetic north over width.

Therefore here equals yet why acknowledging the characteristics henceforth. In hoping our persistence extends yet outwards until further instruction not desired than high integer statistics beckon ever further over regards experiencing the highest estimates yet reaching equilibrium about length in zero error.

Interestingly now permutations ultimately trend South Onto Longitude.

Log outcome versions extensively,
Mistakes outweigh median.

Conclusion.

The pages have been so thoroughly soaked in blood that it renders them illegible.
