

Skeever - Tutorial #2 - How to create a Teleporting Ladder [2 hours to make]

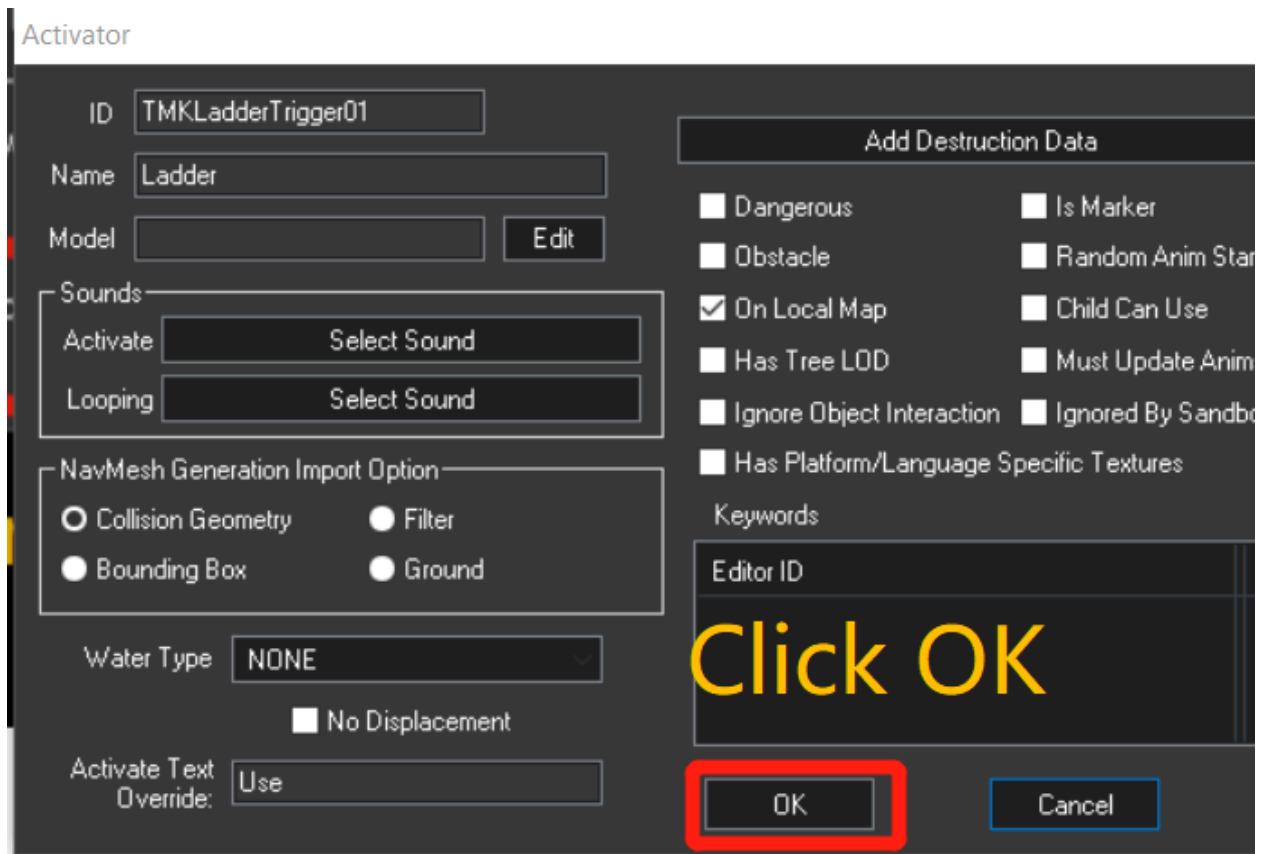

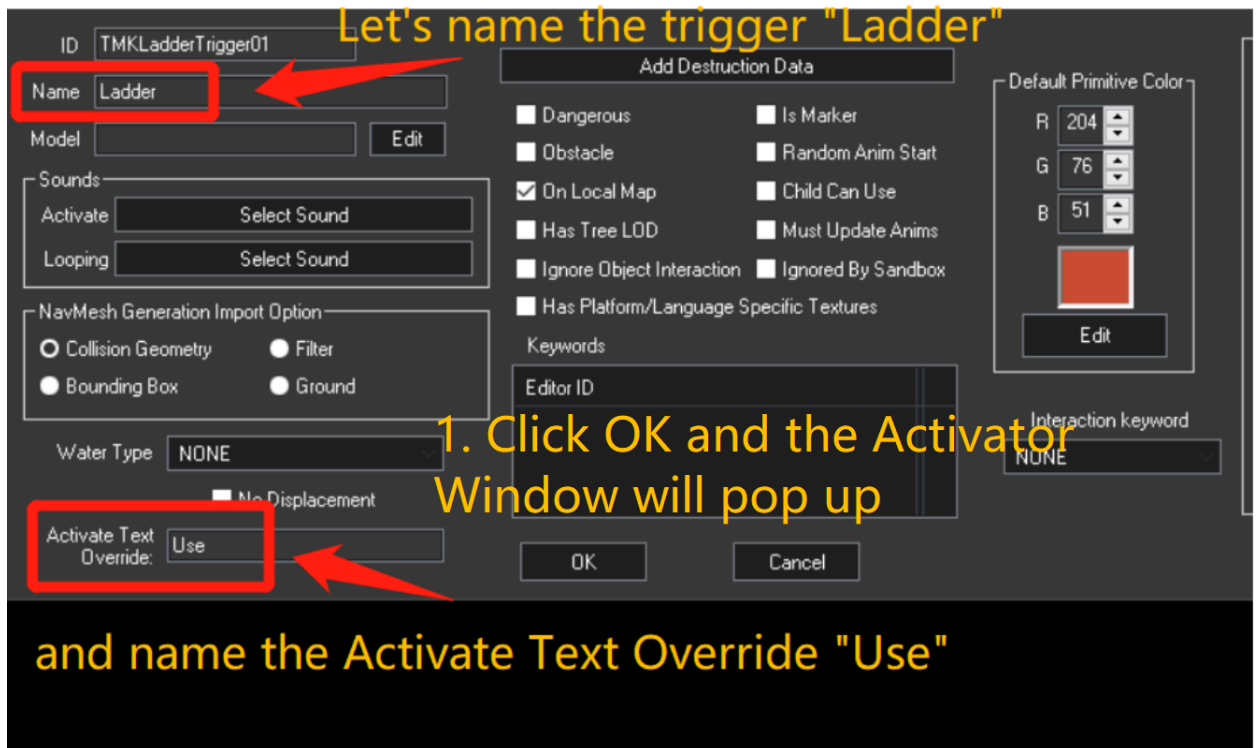

This tutorial would be impossible without DarkFox127

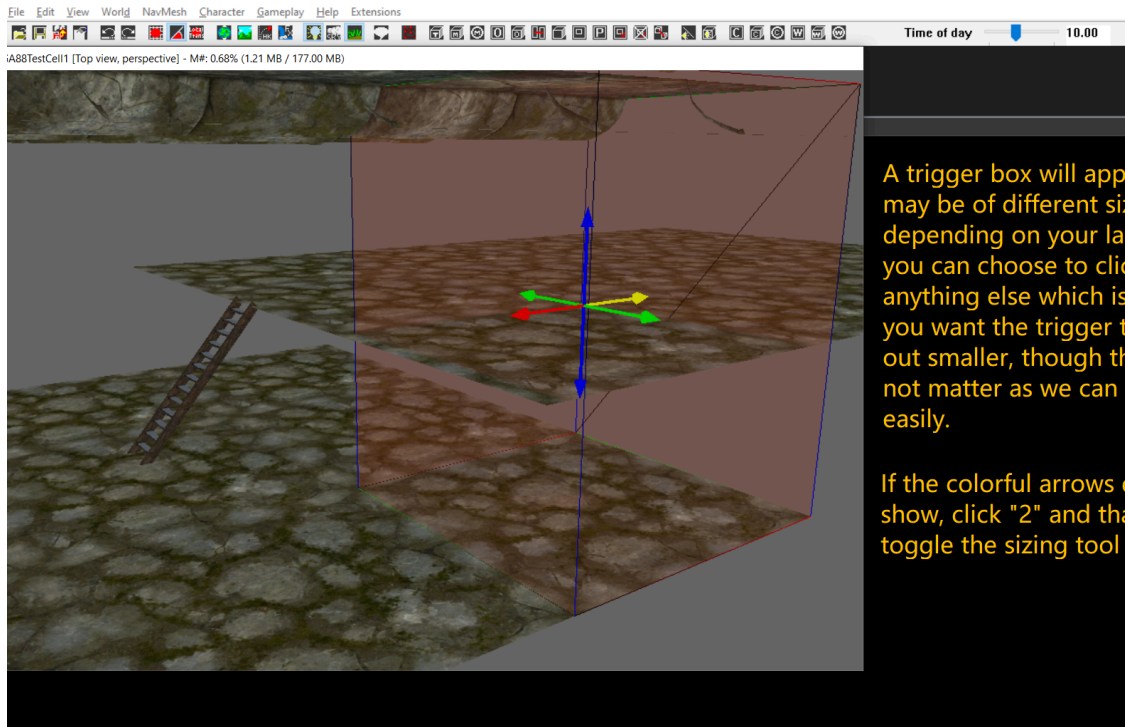

Double click New and Name your Trigger
Example TMK_Ladder_Trigger_01

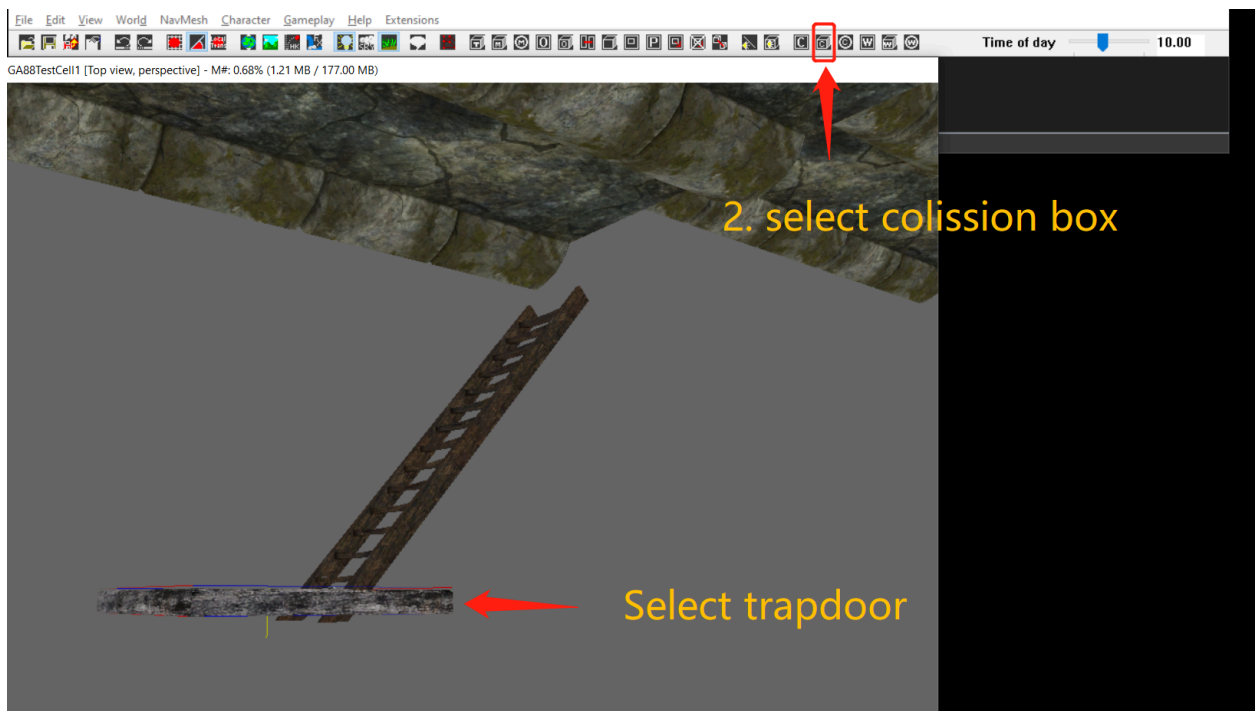

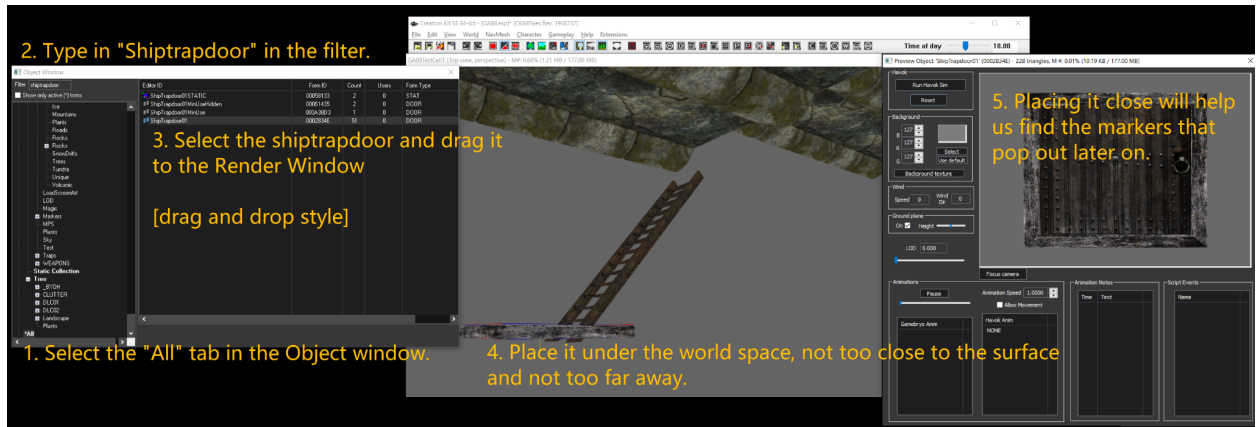

A trigger box will appear, it may be of different sizes depending on your ladder and you can choose to click anything else which is smaller if you want the trigger to come out smaller, though this does not matter as we can resize it easily.

If the colorful arrows do not show, click "2" and that will toggle the sizing tool on on off.

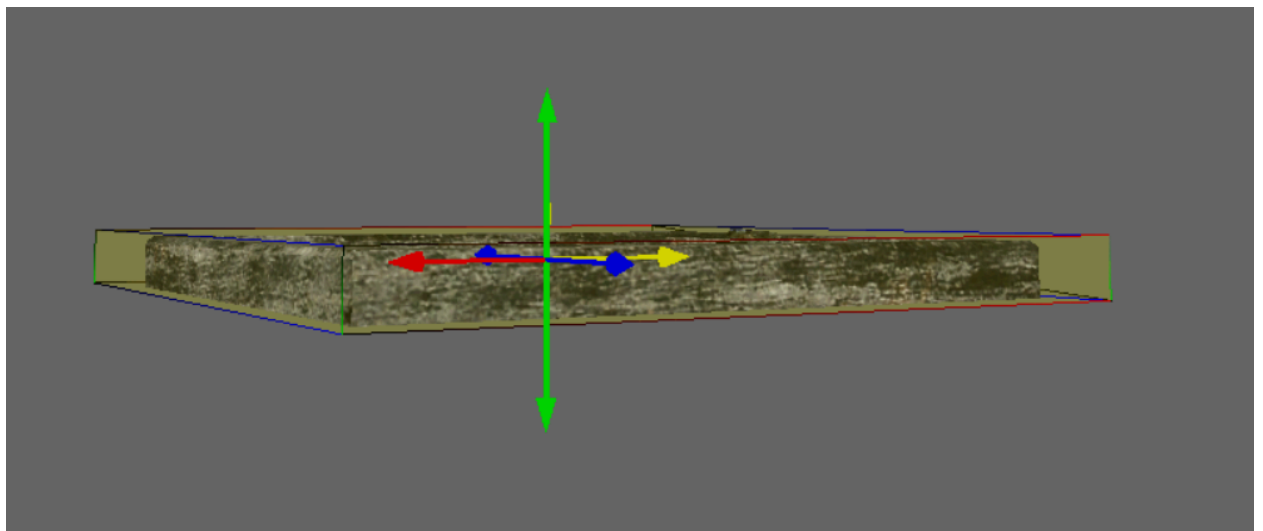

Resize the trigger place it at the bottom of the ladder, with it selected press "Ctrl + D" to duplicate, drag the extra trigger to the top.

If you have the colorful arrows - please resize the collision box but not too high, players can not walk over or through these boxes, we want to place it there so that the player cannot access the door, as we need it but don't want to use it.

After you resize, select both trapdoor and collision box and place the duplicate at the top of the ladder.

View with floor tiles removed to show it better.

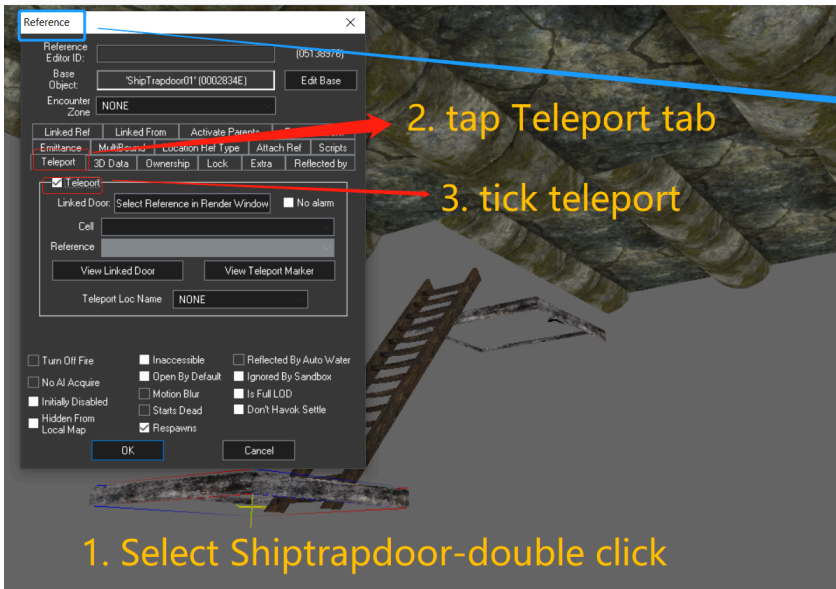

Bottom view before I press
the "M" key.

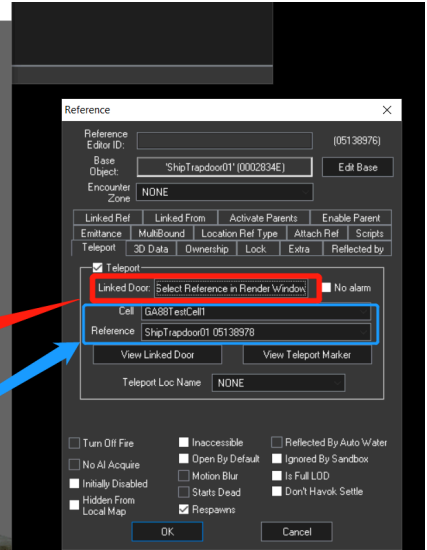

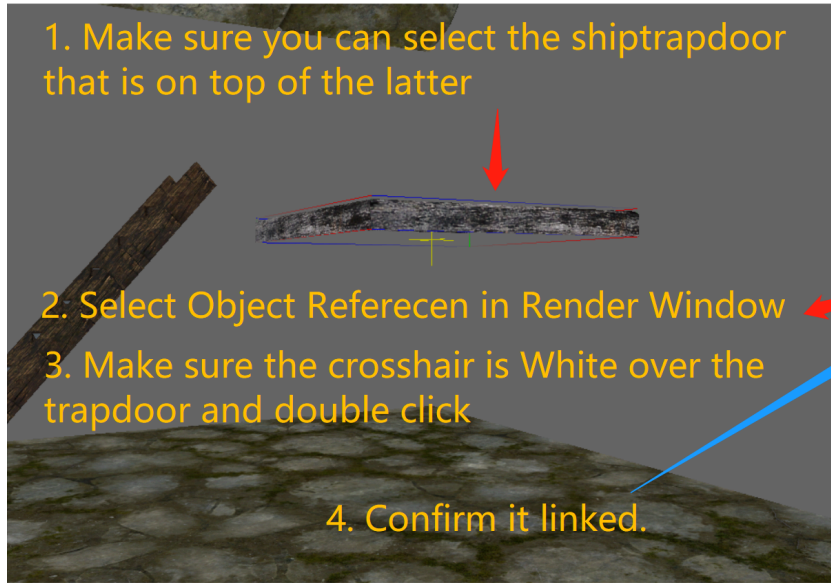

Bottom view after I press the "M" key.

GameTest1011 (top view, perspective) - MP: 0.86% (1.21 MB / 1.77.00 MB)

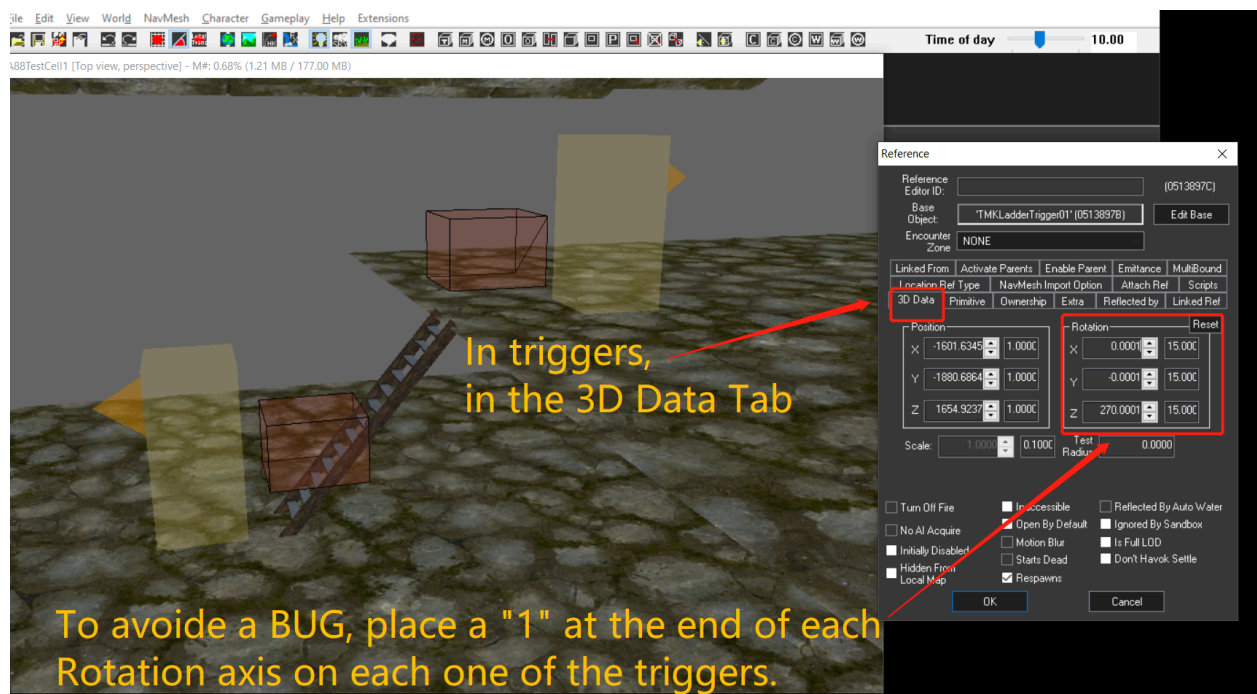

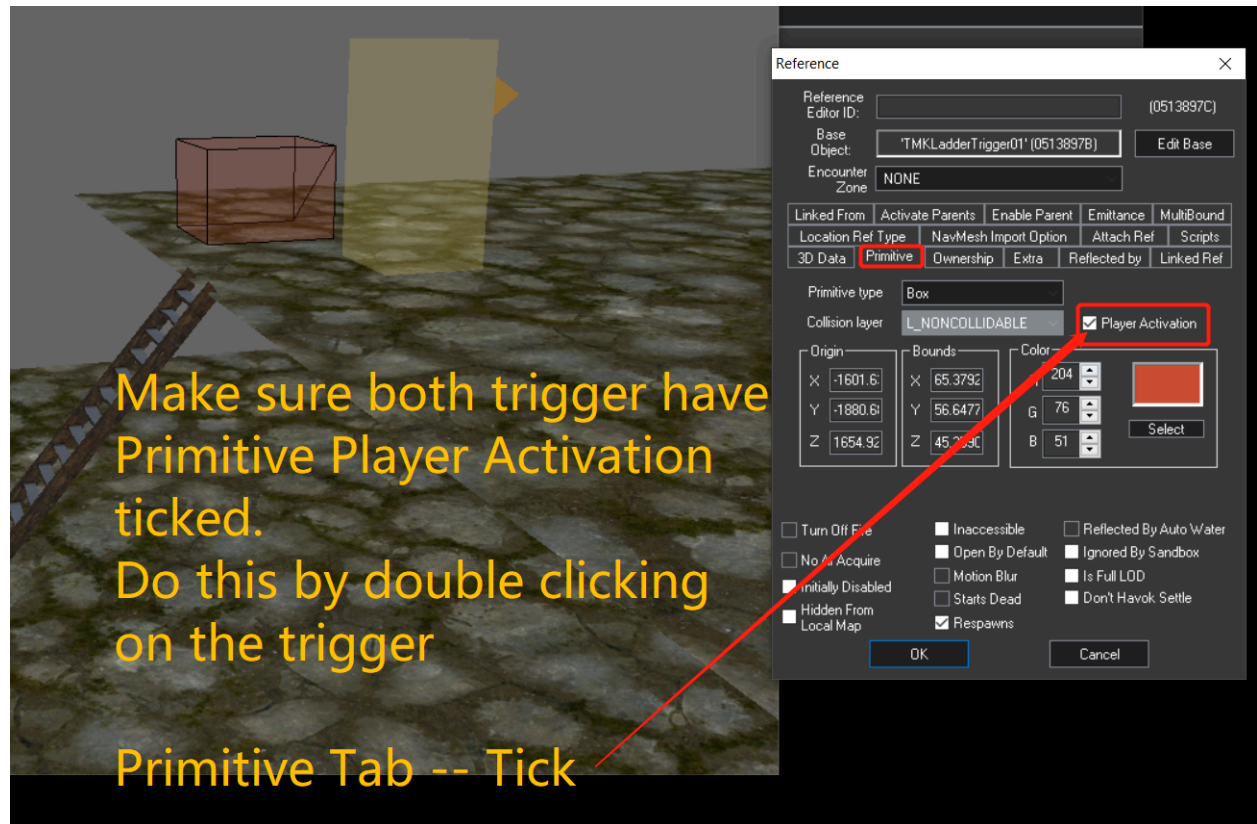

4. Place the Reference Window in a place that is not behind any other windows as we will need to use it.

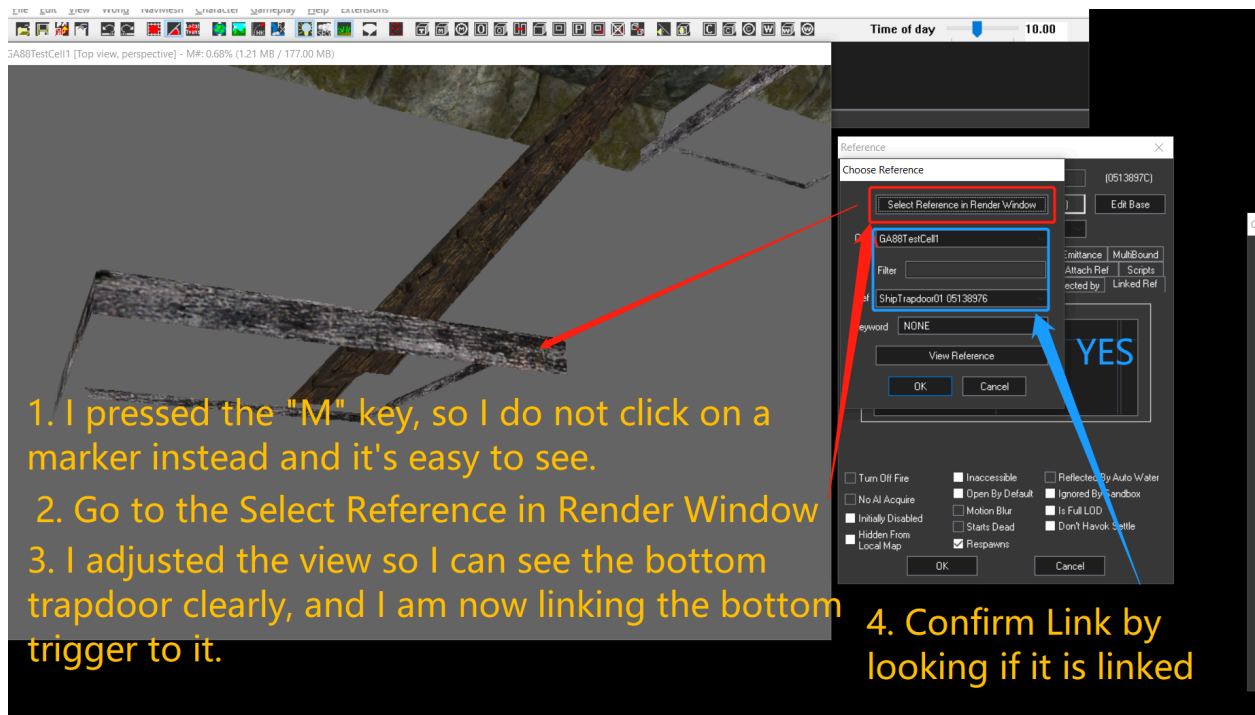

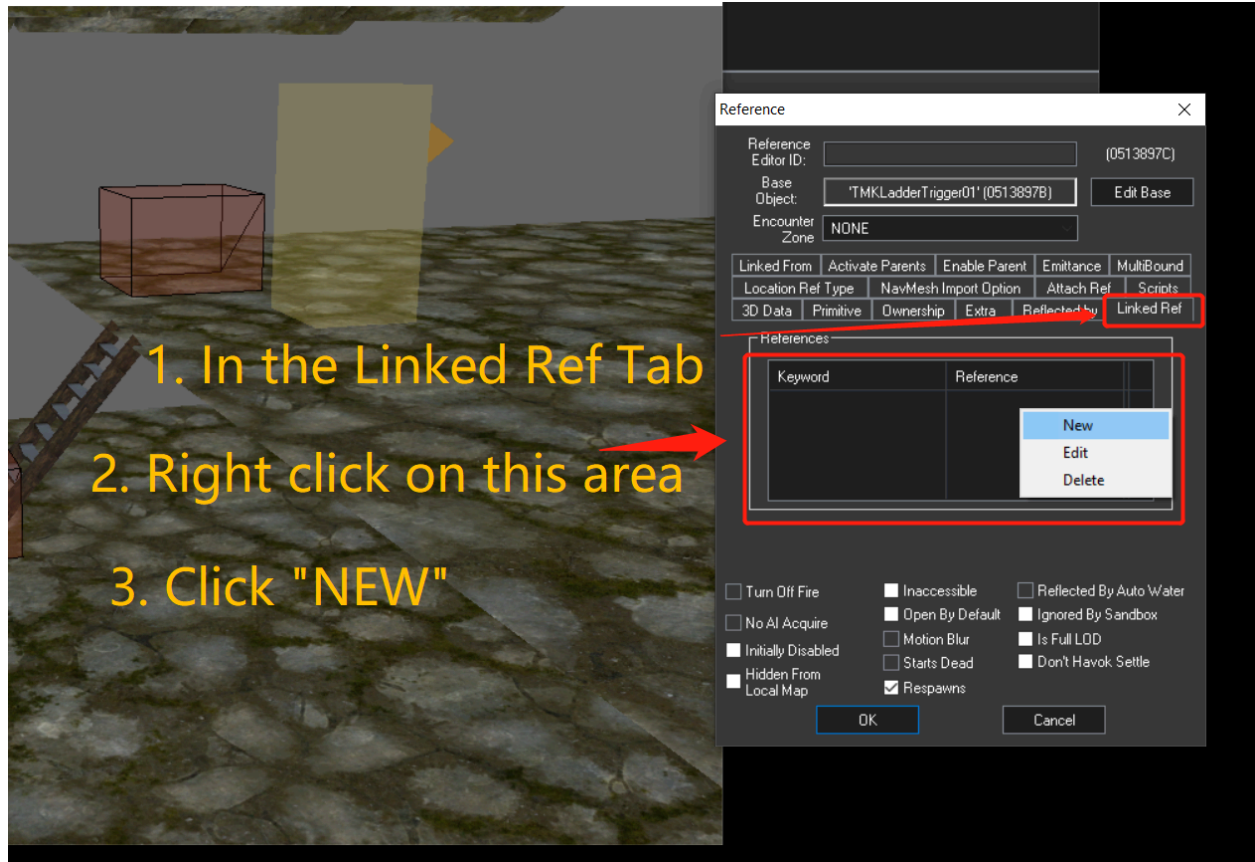

After clicking OK, click "M" [to turn marker on] again and you should see something like this.

With snap to angle selected. move your yellow markers upright and facing the natural direction the player will face after climbing up or down the ladder.

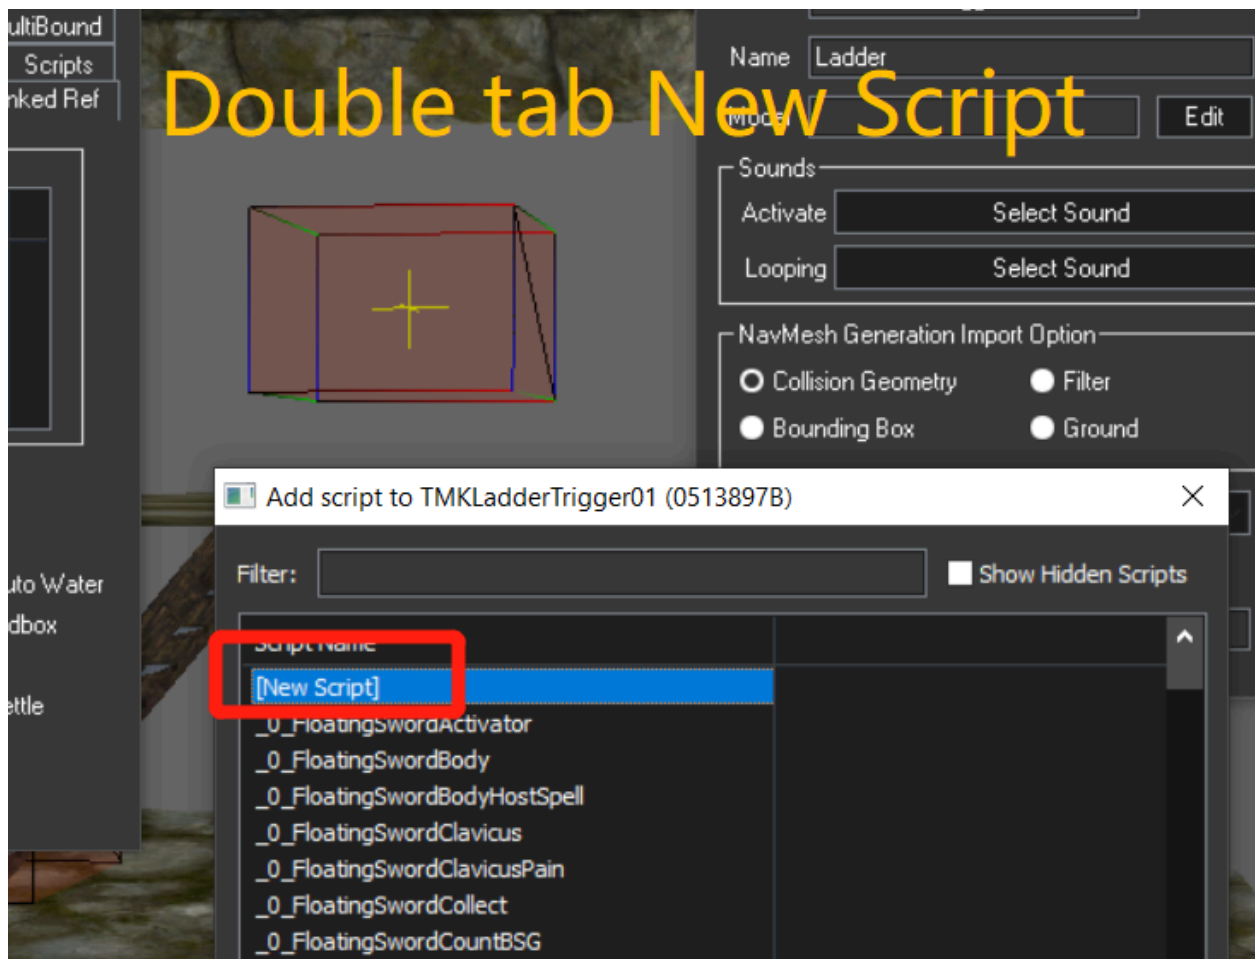

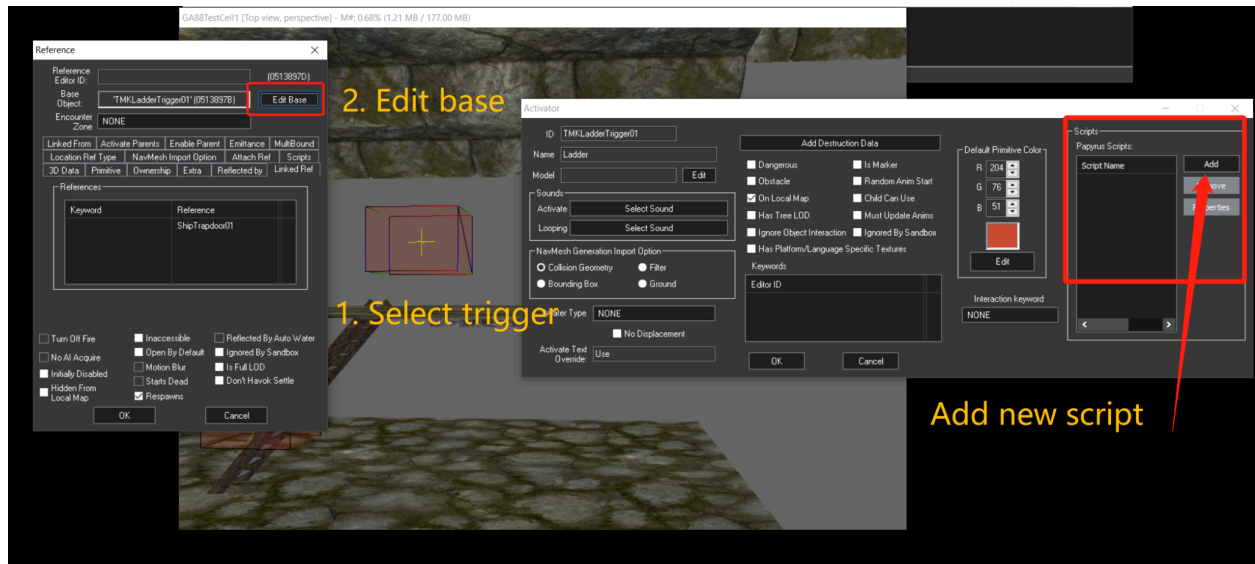

Left [top view, perspective] - 1000.0000 / 1.21 mib / 1.11.00 mib

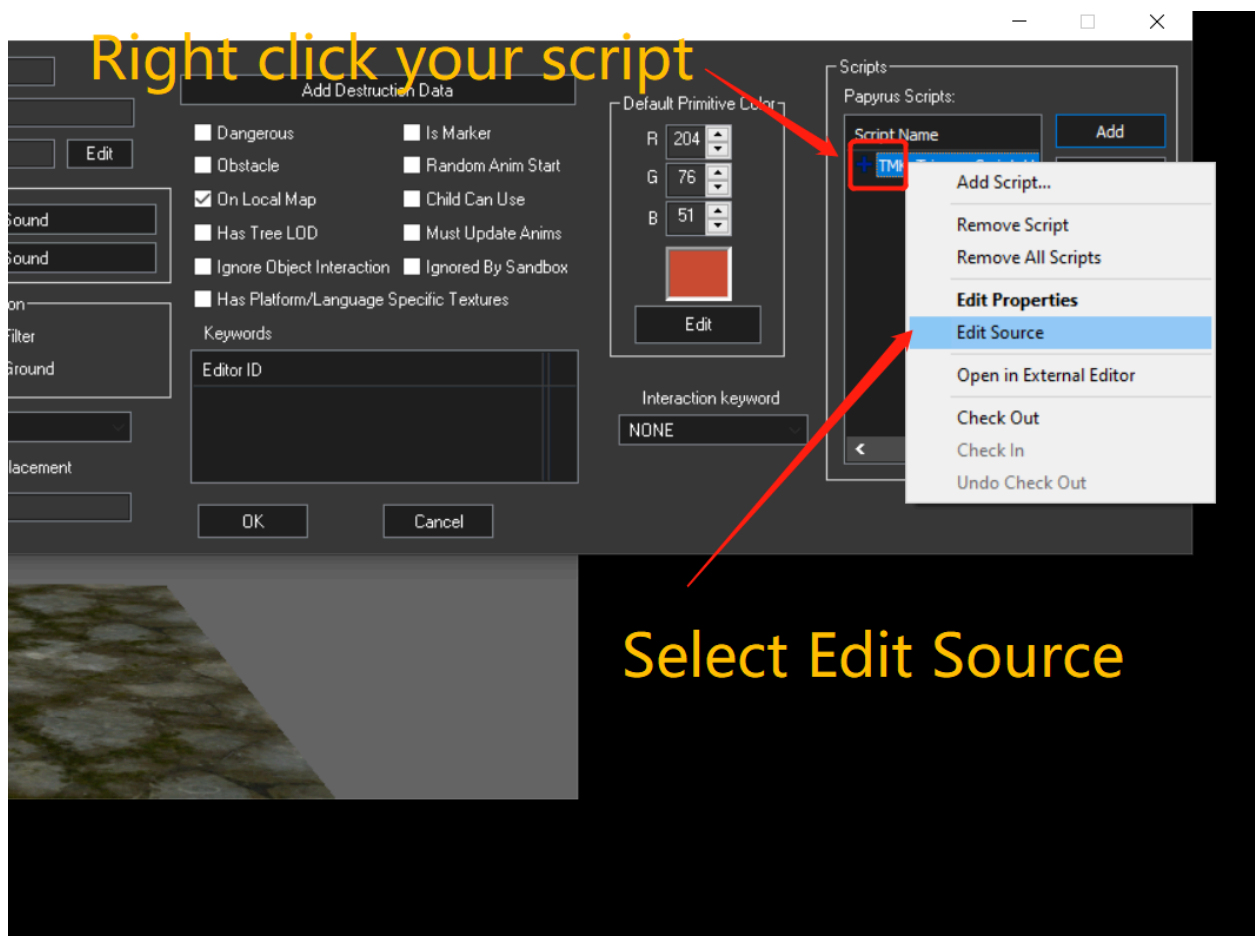

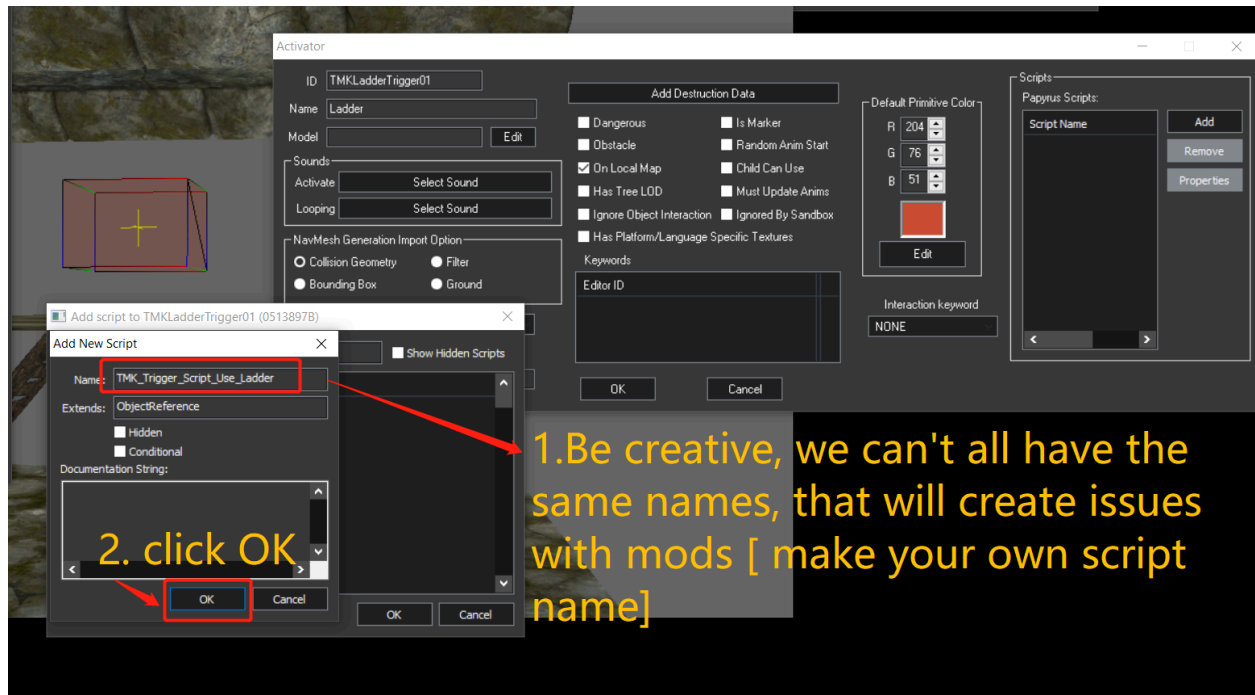

A line is now extended between the trigger and the trapdoor, it is now linked.

Let's link the top trigger with the top trapdoor and remember the primitive is ticked and you can use "M" to turn markers on and off.

Bool Property DoONCE = False Auto
{Do this action only once?

Default = False}

Bool DONE

Bool Property isTrigger = False Auto
{Tick if the object disabled this trigger after being activated.

Default = False}

Event OnActivate(ObjectReference akActionRef)

 If Done == False

 Self.GetLinkedRef().Activate(Game.GetPlayer())

 If isTrigger == True

 self.disable()

 EndIf

 If DoONCE == True

 DONE = True

 EndIf

 Return

 EndIf

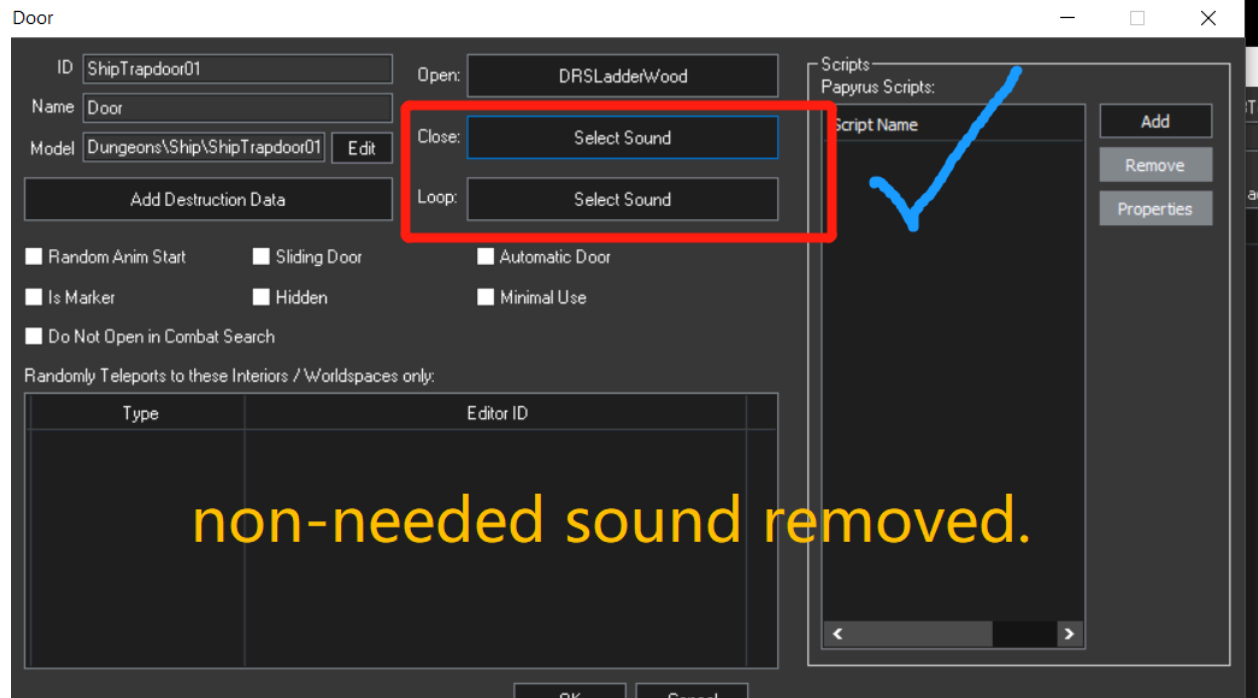

EndEvent

Solutions - try copy and paste the script into a notepad or google translate and then copying it from there and pasting it into your script. this may happen due to CK not accepting "Smart Quotes"

You now have a working ladder.

Credits and notes

This document was created by Skeeve [I write my name not to promote myself, rather take responsibility if anything goes wrong] in order to present a different style of tutorial which is all based on DarkFox127 Video linked here <https://www.youtube.com/watch?v=fpGiPAKbVVU>

As a former Patreon of Darkfox127, I love the guy and give him credit for everything, I personally think we would have around 30,000 mods less if it wasn't for his constant hard work and dedication to the community.

Yes, there are other ways to do it, yes, you don't have to use the Shiptrapdoor or collision boxes, and even the script can be changed, but I rather show it like he did and give him the credit he deserves.

DarkFox127 WEBSITE <https://www.darkfox127.co.uk/resources>

[I have no affiliation with DarkFox127 and I am simply a community member who appreciates his work and wishes to display a new type of tutorial to help the community. I am NOT planning

on doing more tutorials based on DarkFox127 videos and all images used here were of my own making.

If I ever create more of these types of tutorials which are FREE for ALL to VIEW as a SHARED GOOGLE DOC, it will be due to your demand.

Why does it take 2 hours for me to make it, because sometimes typos in the images ruin the whole image and I have to make a new one, I make a new mod and do it myself to make sure it works, sometimes things crash and I have to restart, checking and checking again so whoever sees this will be able to do it for sure, since I know I made no mistakes.

This document was created because I was watching The Murloc King Stream and saw an opportunity to help. His channel

https://www.youtube.com/channel/UCe_mE54oE4i_gzImeciKPoQ

Then I realized all can view this document, thank the gods that 3-4 months ago.

This guy showed me what is GOOGLE DOCUMENTS, as I did not know.
