[IMRaD Framework]

ABSTRACT

The abstract should be written in English in a single paragraph (150–250 words). For Scopus-indexed IMRaD journals, it must be highly synthesized, detailing: (1) Introduction/Objective, (2) Methods, (3) Results, and (4) Discussion/Implications.

1. INTRODUCTION

[Provide the background of the research problem here. Describe the latest phenomena or anomalies in global economics/business ecosystems. Integrate the primary theoretical foundation (Grand Theory), and build a compelling argument regarding the limitations of previous studies through a comprehensive literature mapping to clearly establish your Research Gap and Novelty. Conclude the introduction with an explicit statement of the research objectives and contributions.]

2. METHODS

[Explain the scientific approach and methodology used to obtain your results in a transparent and highly detailed manner so that the study is replicable. Mandatory subsections include: (1) Research Design & Population/Sampling Framework; (2) Data Collection Techniques & Sources (Primary/Secondary); (3) Operational Definition of Variables; and (4) Econometric Models, Estimation Techniques, and statistical software tools utilized (e.g., STATA, PLS-SEM, R, AMOS).]

3. RESULTS

[Present your empirical findings objectively, concisely, and logically. Use high-quality tables or charts to represent key statistical test results (e.g., validity, reliability, hypothesis testing, or regression paths). Avoid repeating entire table rows or statistics within the narrative text; simply highlight the most crucial breakthrough insights.]

Table 1. Descriptive Statistics and Model Estimation Results

Research Variable	Coefficients / Mean	Statistical Decision
[Insert Data]	[Insert Data]	[Insert Data]

Figure 1. Empirical Research Framework and Hypothesized Paths

4. DISCUSSION

[This is the most critical section of a Scopus-indexed article. Provide a deep, thorough scientific interpretation of your findings: Why did these specific relationships or coefficients manifest? What underlying economic, management, or behavioral mechanisms govern these results? Critically compare and contrast your findings with your primary theory and previous high-impact international literature to clearly anchor your scientific contribution—stating whether your results validate, refine, or challenge existing paradigms.]

5. CONCLUSION

[Provide a synthesis of the final answers to your research questions, rather than just summarizing the statistical findings. It is mandatory to include: (1) Theoretical Implications, (2) Practical/Managerial Implications, and (3) Limitations & Future Research Agenda.]

ACKNOWLEDGMENT

[Express gratitude to individuals, organizations, or institutions that directly contributed to the research either materially or non-materially. Explicitly mention funding bodies or grant numbers.]

REFERENCES

[References must be managed and formatted strictly using a reference manager in perfect accordance with the APA Style 7th Edition. Minimal 80% must come from high-impact peer-reviewed international journals within the last 5 years.]
