Am I a good candidate for SMILE laser surgery

We perform the same comprehensive eye evaluation for SMILE as we do for all of our LASIK candidates. A good SMILE candidate tends to be a patient with less than 3.0 Diopters of Astigmatism and has nearsightedness (myopia) up to 9.0 Diopters.

I'm worried about dry eye, is SMILE a better option?

Studies have shown a more rapid return of eye comfort after SMILE and less dry eye sensation compared to LASIK. However, neither procedure should cause long term eye dryness. As mentioned above SMILE with its smaller incision can lead to a more rapid recovery in dryness symptoms versus LASIK. Even studies looking at LASIK have found patients have less dry eye symptoms 6 months after LASIK than before, this is assumed to be due to the drying effects of contact lenses.

I want all-laser femtosecond LASIK. Is this similar?

Yes. SMILE has no use of a blade. The Zeiss Visumax femtosecond laser creates a contact lens-like shape of tissue in your cornea. Then, Dr. Swanic gently removes this tissue which corrects your myopia. The recovery is rapid with most

patients seeing as well as LASIK patients on day one and exactly the same at week one. The vision is typically very good the very next day and people can return to work and even wearing eye makeup the very next day.

Company Description

Las Vegas Eye Institute is dedicated to providing the highest quality of care in the Las Vegas Valley.
