About the Project-BIOSUSTAIN:

The overall objective of the international project BIOSUSTAIN is to contribute to the preservation of BSB ecosystems through innovative approaches to traditional ecological knowledge. The project envisages pilot studies in partner countries and explores the application of traditional knowledge in areas such as traditional crafts, food traditions, traditional medicine, etc. while also building capacity of local communities as stewards of traditional ecosystems and promoting public awareness of the value of local knowledge and community practices.

The Project is implemented by the Georgian Arts and Culture Center (Georgia) as Lead Partner, in partnership with Varna University of Management (Bulgaria) and Aristotle University of Thessaloniki (Greece), with the support of the **EU Black Sea Basin Interreg NEXT program**. (2026 - 2027)

Interreg
