

The Czech Republic uses a similar system to the East Germans for breed survey. They also use a series of letters, as well as numbers in the breed survey. The following table is a translation of a Czech "Bonitacni Karta", or Survey card, and describes the various numbers and letters used to describe a particular dog. These following codes has been valid in the Czech Republic since the reform in 1990.

What is a Breed Survey?

Breed Surveys. The breed survey is the ultimate instrument used as the selection method for the German Shepherd Dog Breed. ... This certificate is issued by our organization which follows a special procedure where the breed survey judge evaluates the dog's temperament in different stimulus situations.

Overall Appearance		Appropriate Breed Features		Ears, Color, Pigmentation		Personality Traits	
typical appearance of a mongrel	0	faulty head	A	light eyes	O	considerable hardness, courage and willingness to fight	1
too light, greyhound like	1	steep angles of the fore legs	B	poor pigment	T	good hardness, courage and willingness to fight	2
small, under sized	2	straight, short croup	C	wolf grey, light features	U	sufficient hardness, courage and willingness to fight	3
light for height requirement	3	steep croup	D	wolf grey, dark features	V	not sufficient hardness, courage and willingness to fight	4
Required strength, build, refinement height: Dog: 60 - 62 cm Female: 55 - 57 cm	4	steep angulation hind legs	E	incorrect ears	W	let go sleeve on handler's order	P
required strength, build, refinement height: Dog: 63 - 65 cm Female: 58 - 60 cm	5	steep angulation thigh bone	F	dark pigment	Q	does not let go sleeve on handler's order	N
height within standard, but more coarse, less refined	6	incomplete set of teeth	G	Black with light features	I		

oversize but proportionate, complies with standard for build, refinement	7	bite irregularity	H	black with dark features	X		
too heavy, very little refinement	8	correct expression, excellent proportions	J	totally black	Y		
coarse	9	long back	K	long coat	Z
