

The Catastrophic downfall during the Bold escape

Information

At approximately 0700 D-5837 Ricky Timpson was seen entering D-block showers and after doing so many D-class ran out and started shooting the walls and began to riot. They call a sweep and whilst pushing in one d-class runs to the showers and seconds later an explosion is heard

After the explosion occurred the emergency system called for all GSD personnel to react to the location of the explosion d-block showers, and when they did so they found a tunnel leading out of the showers into an unknown space.

After the occurrence the GSD captain who was on duty called for a lockdown of D-block to occur and whilst doing so called for all GSD personnel Except SCU and SRU to go to D-block ASAP and for SCU and SRU to continue patrolling to attempt to locate the exit of the tunnel.

Whilst SRU and SCU personnel are doing so all other GSD personnel are to lockdown D-block and head to secure the tunnel so that no more D-class might escape, but whilst doing so ensuring that they are not endangering their own lives and giving D-class the chance to make a move.

Once the Tunnel is secured then maintenance must be called to patch up the whole within showers and whilst they are doing so the GSD personnel are to be holding the entrance of showers making sure no other d-class makes it to the tunnel or disrupts the maintenance crew.

Once all of the issues in showers are done the personnel present in the d-block will move on to getting a sweep done to look for any explosive material.

Another explosion is heard near LCZ. This is then called out on the emergency system requesting for personnel to respond ASAP. The acting captain must now appropriately delegate his personnel with the D-class being present in LCZ whilst a sweep is occurring. The rest is untold....
