SUPER **AFFILIATE** FUNNEL

API Docs

The SuperAffiliateFunnel.com provides a REST API Interface for advanced users who want to interact with their account in real time.

This is an advanced topic and all the information provided below assumes you are a developer (or are working with one) to create the integrations for you.

Authorization

The API requires a **headers type** authentication so you will have to pass the **key pair** API with your API key as the value.

Example: (if making a PHP cURLl request)

CURLOPT_HTTPHEADER => array(

  'api: YOUR-API-KEY'

 ),

API Endpoints

Below you'll find the API endpoints and methods associated with them, make sure to check back on this document as more will be added in the future.

API Endpoint - REFERRALS

URL   : https://superaffiliatefunnel.com/wp-json/leads/v1/leads/
METHOD   : GET

This endpoint provides a list of all of your referrals with all their data, example:

{

```
    "ID": 3010,
    "cname": "James",
    "lname": "Bond",
    "cemail": "jamesbond123@gmail.com",
    "src": "007",
    "subid": "",
    "active_streams": {
        "gotbackup": true,
        "sendshark": true,
        "roipanel": false,
        "legacy": false,
        "mlgs": false,
        "udimi": false,
        "m3": false
    }
},
```
