

the Product is coaching on how to:

- ✓ Earn an average income of \$118,000, up to \$170,000 or more, with security and benefits, including stocks in fast-growing tech companies.
- ✓ Save yourself from automation and AI with a fun, exciting job that puts you on the top of the tech food chain.
- ✓ Live the laptop lifestyle and work remotely, without being forced into an office every day, so you can control your daily schedule and reclaim your life.
- ✓ And do it all while spending about 90% less money than coding bootcamps that don't even guarantee you a new job!

Avatar

25-35 MALE

Coder/deleoper

Current situation: Working a 9-5, Earning 40k/year -

Fears: Afraid that his job might get stolen by a.i.

Dream state: He wants to earn 115k/year being a Developer (coder) and live the "laptop lifestyle". He wants to be location independent and control his own schedule.

SL: How to prevent your job as a developer from being replaced by AI

With the recent breakthrough in AI technology,

Developers being replaced by AI in the next few years is basically written in stone.

Within 2 years it's almost certain that your current job as a developer will be fully replaced by AI.

This means, **No more job for you...**

No more falling asleep in your warm, cozy bed.

No more fresh food to eat,

And no more roof over your head to shelter against storms...

However, there is a way for you to prevent this from happening.

I have already made my job as a developer bulletproof from whatever AI will come up with,

And I suggest you do the same.

[Click here to never worry about being replaced by AI ever again, and become BULLETPROOF from whatever AI will come up with in the future.](#)

SL: AI is coming for Developers, and it's coming fast

Dear John,

Your job as a developer is in danger...

AI is slowly wrapping its fingers around developers' jobs and is just about to rip them completely apart.

Matter of fact, it's almost certain that you'll lose your job, within the next 2 years.

This means: The bed you fall asleep in, the house you live in,

And the food you currently have in your refrigerator will be:

GONE!

Gone with the snap of a finger.

And the worst part is,

You won't even be able to find a new job.

This is because AI can do all the work you can, yet do it 100x faster and cheaper.

You will be like a chihuahua compared to a lion.

If you're smart, you've probably come to the realization that you're fucked.

This is true for most developers,

However, there is a way to outsmart AI in the language of code,

A way to prevent AI from ever taking your job away from you,

And a way to survive the upcoming mass extinction of developers.

If you want to keep being a developer,

Guarantee your job security from AI,

And add a couple more zeros to your paycheck.

[This is exactly how you can.](#)

SL: An extinction of coders is on the horizon - *and AI is the meteor*

In only a couple of months, ChatGPT went from being able to write simple code like “Hello world”

To be able to create full websites, chrome extensions, and convert language models effortlessly.

AI can now do tasks that would take a normal developer one week in only a day or a couple of hours.

This makes our job at risk.

For 90% of developers the next few years are going to include the following:

Being fired and replaced by AI, then hopelessly searching for a new job in a market that no longer needs developers.

However, for the remaining 1% of developers, the following years will include earning more than 6 figures a year,

Working by your own schedule, and being able to do that from anywhere in the world.

You can sit literally work from a flamingo nest if you so desire.

And AI won't be any threat to your job, or service whatsoever.

If you want to be in the 1% of developers and not only keep your job but make your life 1000x better.

[Click here and I will show you how I've done it.](#)
