

# Start Coding worksheet

## “Goals, Goals, Goals”

We'll use this worksheet to inform and design your personal, learn-to-code curriculum.

- **Why are you learning to code?**

- I am learning to code to add hard skills to my resume and earn side income as a freelancer.

- **What's your goal?**

What's a tangible learn-to-code goal you hope to reach in 6 months?

- Code for at least 1 hour everyday outside of vacations
- Complete the Responsive Web Design, Javascript and Front-End Web Developer FCC Courses
- Read Smarter Way to Learn Javascript
- Create a more detailed business plan/narrow in on a niche

12 months?

- Have a beautiful functional portfolio website with at least one high quality mock project displayed and several smaller projects
- Taken on at least my first real project/client
- Complete Github and Git Udemy course
- Complete PHP Udemy course
- Complete the Wordpress Udemy course
- Complete the Web Design Udemy course
- Start a React.js course

- **What does successful learning look like to you?**

- Building increasingly complex projects
- Having enough knowledge of coding, UX/UI and digital marketing to launch a successful side business as a freelance web developer

- **How will you measure that success?**

- Completing courses
- Building things that add value to my portfolio and position me as an expert in a TBD niche
- Tracking what I have completed and measuring it against my goals

- **Do you have a timeline, or any deadlines, associated with your learning goals?**

- Start earning side income by the end of the year
