PAT-Call: 16-April-2025

Talk thread: https://talk.openmrs.org/t/bahmni-pat-call-on-16-april-2025/45867

AGENDA:
1. Community updates
2. Long loading time for OpenMRS for large patient data
3. Error on opening any patient profile

Attendees
1. Mohan
2. Rahul
3. Dev
4. Satish
5. Shilpa
6. Akhil
7. Felix

[16 April 2025]
Community Updates:
- The address hierarchy issue discussed last week has been resolved by the OpenMRS team and it has been pulled into the Bahmni OpenMRS as well.
- The CSV issue is also resolved. Bahmni team had raised a PR that has been merged by the OpenMRS team. We recommend the community to test it on the https://docker.standard.mybahmni.in/ environment
- We will have some updates on the global property issue next week.

[Shilpa]: Long loading time for OpenMRS for large patient data
- [Mohan]: Maybe look at the Bahmni startup script to conditionally re-build the index. If this doesn't work then going through the logs and identifying which step takes time is recommended.
- Memory profiling using Yourkit (https://www.yourkit.com/) can also be explored.

[Felix]: Error on opening any patient profile
- [Felix]: orders not syncing to Odoo
    - [Mohan]: Need to do metadata configurations. Please refer to this link https://bahmni.atlassian.net/wiki/spaces/BAH/pages/900464675/Odoo+Sales+Configuration

[9 April 2025]
Community Updates:
- Mostly focussed on bug fixing from the latest security patch release (Jira)
  - Address hierarchy mapping issue
    - https://github.com/Bahmni/openmrs-distro-bahmni/pull/224/files
  - Not all fields in address hierarchy getting displayed
    - https://github.com/Bahmni/openmrs-distro-bahmni/pull/224/files
  - Global properties issue
  - File Upload

[Arbaz]:
- How to change the data type of doctor name from text to dropdown ?
  - Registration Module
- Issues with syncing Registration Fee and Consultation Fee
  - Reg fee is an orderable
  - Saleable concept gets created as a product

[Felix]:
- Atomfeed Console shows Down for maintenance
- Radiology Order is not getting synced
  - Check into logs of pacs-integration

[David Mukunji]:
- Form builder privileges are being saved and lost later
- Bahmni Standard

[Josue]:
-

[2 April 2025]
Community Updates:
- Mostly focussed on bug fixing from the latest security patch release (Jira)
  - Address hierarchy mapping issue
  - Not all fields in address hierarchy getting displayed
  - Global properties issue
- Hopefully we fix these bugs by next week, and then later do a patch release

[Felix]: SNOMED and CDSS Integration
- [Felix]: Tried to pull the images but there was something to uncomment on the env file

- [Mohan]: Please follow [this document](#). It will resolve most of the queries. There are a few global properties as well that need to be set up. All of these steps are mentioned in the documentation link above.
- [Felix]: Where can I do the white-labelling?
    - [Mohan]: Follow these links:
        - https://bahmni.atlassian.net/wiki/spaces/BAH/pages/115780492/Configure+White+Labeling
        - https://bahmni.atlassian.net/wiki/spaces/BAH/pages/115780434/White+Labeling+of+Bahmni
- [Felix]: How do I sync the registration fee?
    - [Mohan]: Please follow [this talk thread](#)

[Shilpa] Alternative to CSV import for bulk data migration:
- Bulk patient upload is taking a lot of time, and it sometimes fails as well. There are about 2000 patients, and the file size is in a few MBs.
    - [Angshu]: You need to look at the file size limit, and ensure the uploaded file is within the limits. You may also look at boosting up the memory.
    - [Angshu]: The other option is to write a script and upload directly.
    - [Mohan]: Maybe stop all the downstream systems, upload the file and then restart the rest of the services.
