

Journal 01

8/29:

Today in class, we did a variety of things to help introduce ourselves to the course. First, we watched Mr. Cribbs hit Mr. Brown with a sledgehammer. Upon returning to the Design Den, we observed some creations Mr. Cribbs had previously created through the laser cutter, cnc router, or 3D printer. We also went over the syllabus, our class webpage, and a few of the programs we would be using in the future.

From today's class, I was able to learn quite a few things. One of the things I learned was how useful the instruments we would be using are; they are capable of creating an innumerable amount of things. Through the syllabus, I was able to learn about the rules, regulations, and benefits we were to expect from the course. Also, I had a bit of an introduction to Physics with the sledgehammer presentation we witnessed. Lastly, I enjoyed learning about Fusion 360 and Inkscape along with their capabilities.
