Summary

Full stack web developer with a focus on frontend architecture, clean UI/UX, and scalable components using React and Next.js. Known for fast learning, async collaboration, and building real-world apps with modern stacks.

Projects

🧩 Word Unscrambler

- Built with Next.js, Next.js API routes, and TypeScript.

- Used a dictionary-based matching algorithm to solve word puzzles with 80%+ accuracy

🌐 Carbon Footprint Tracker

- Built with Vite and ES6 JavaScript

- Features a dynamic form for selecting categories and activities

Tech Stack

Frontend: React, Next.js, TailwindCSS, HTML5, CSS3

Backend: Node.js (basic), API design

Tools: Git, GitHub, Vercel, DigitalOcean, Linux, VS Code

Learning: TypeScript, Zod, Docker

Highlights

- Strong async communicator across **Communication Platforms** & **GitHub**

- Comfortable with agile sprints and pull request workflows

- Focused on clean code, accessibility, and responsive design
