Write your abstract here. The abstract is written in English with a maximum length of 250 words. It is written using single spacing and **Garamond font size 11 pt** without paragraph indentation. The abstract is arranged in one paragraph containing a concise and clear summary of the entire contents of the manuscript. The beginning of the abstract must contain a brief introduction to the problems underlying the study, followed by the main objectives of the writing. Furthermore, a brief explanation of the research method or approach used in obtaining data or analyzing the issue being studied is given. After that, a summary of the main results or findings that are the core of the discussion is presented. The abstract is closed with a conclusion that emphasizes the contribution or implications of the study conducted. The abstract is not allowed to include citations, unexplained abbreviations, tables, or images.

1. Introduction (*Heading 1*) (Garamond,bold, 14 pt)

The introduction should be clear and provide the legal issue to be discussed in the manuscript. Before the objective, author should provide an adequate background, and very short literature survey in order to record existing solutions, to show in which is the best of previous researchers, to show what do you hope to achieve (to show the limitation), and to show the scientific merit or novelties of the manuscript. At the end, you should explain the urgency and clearly state aims of your study. At the end, you should explain the urgency and clearly state aims of your study and mention problem of the research in this section. (Garamond,12pt)

2. Research Method (Garamond bold, 14 pt)

The methodology section should be written descriptively and is expected to clearly explain the research process undertaken. This section should outline the type of research, the specific research approach adopted, the data sources used, and the data analysis methods applied. In addition, authors are encouraged to outline the analytical framework or mechanism used to examine the issues studied. This section should be structured in such a

way as to provide the reader with a comprehensive understanding of how the research was conducted and how conclusions were drawn. (Garamond,12pt)

2.1.Headings (Garamond, bold, 12 pt)

2.2.Headings (Garamond, bold, 12 pt)

2.3.Headings (Garamond, bold, 12 pt)

3. Results and Discussion (Garamond bold, 14 pt)

The Results and Discussion section is designed to present the main findings of the research systematically and followed by an in-depth discussion. The presentation of the results must be done objectively, clearly, and not colored by speculative interpretations. The data presented can be in the form of narratives, tables, or images that are relevant to the research problem, but all of the data must be accompanied by adequate explanations so that they can be understood by the reader. In the discussion section, the author must relate the findings to previous theories or studies, and show whether the research results support or contradict existing literature. The author also needs to explain the implications of the findings, both conceptually and practically, and show the scientific contribution made to the development of science in the field being studied. If limitations are found in the research, the author is advised to convey them honestly as a form of scientific responsibility. The entire contents of this section must be written in an integrated manner, not separated between results and discussion, and reflect a critical analysis of the data obtained. (Garamond,12pt)

Table

Tables should be numbered consecutively in the order in which they appear in the main text. Footnotes associated with tables should be placed directly below the table content and should be indicated using lowercase letters at the top. The use of vertical lines within tables is discouraged. Authors are advised to limit the number of tables to those that are necessary and to avoid repeating data that has already been described elsewhere in the manuscript.

Table 1. Table title

Heading 1	Heading 2	Heading 3
Table size	can be	edited

Notes: 1. If you must attach a note for further explaining some data in the table, please use 8 pts font size here. 2. If more than one note is to be attached, please number them with “1, 2, 3 ...” and separate them with a period or a semicolon. 3. The right and left borders of the note area must be aligned in relation to those borders of the table above it no matter what the table size is. 4. Please distribute your notes evenly between the margins.

3.1. Headings (Garamond, bold, 12 pt)

3.2. Headings (Garamond, bold, 12 pt)

3.3. Headings (Garamond, bold, 12 pt)

4. Conclusion (Garamond, bold, 14 pt)

The Conclusion section is written concisely, concisely, and directly leads to the core of the research findings. The conclusion does not repeat the results or discussion in detail, but summarizes the main points that have been obtained from the research. The author must convey the scientific contribution or new findings produced, as well as their implications for the development of theory, practice, or policy that is relevant to the field of study. Avoid including new data or references in this section. If necessary, the conclusion can contain suggestions or recommendations based on the research results, but must be delivered specifically and argumentatively, not in a general manner. Writing the Conclusion must be able to close the article strongly and convincingly, and show the relevance of the research results to the problems raised at the beginning of the article. **(Garamond,12pt)**

5. Acknowledgment (Garamond, bold, 14 pt)

Acknowledgement section is not numbered and presented after the conclusion. Use the singular heading even if you have many acknowledgments. Avoid expressions such as “One of us would like to thank ...” Instead, write “This work is supported by the National Science Foundation (Grant numbers: xxxx, yyyy).” **(Garamond,12pt)**
