```apex
/*  Trigger created by Shannon Howe on 1.16.2016 for case 00555
 *  this trigger updates the company name for leads
 *  that were created with incorrect names */
//we are going to be doing something to the
//lead record before it is inserted or updated
trigger leadTriggerExample on Lead (before insert, before update) {
        //this is called a loop. it will "loop" through
        //all of the records the trigger is looking at
        //and action on the ones that meet its criteria
        for(Lead leadInBucket : Trigger.new) {
           //similar to a formula function IF,
           //this IF checks the company field for the wrong name
           //and updates the company when it needs corrected
           if(leadInBucket.company == 'Sales Force'){
              //corrects the name to Salesforce
              leadInBucket.company = 'Salesforce';
            }
        }
}
```
