SUBJECT	**Social Science**
Name of the Topic/Chapter	**Print Culture and the Modern World**

Space for paragraph and figure(if required)

Three types of arguments have been usually put forward.
First: print popularised the ideas of the Enlightenment thinkers. Collectively, their writings provided a critical commentary on tradition, superstition and despotism. They argued for the rule of reason rather than custom, and demanded that everything be judged through the application of reason and rationality. They attacked the sacred authority of the Church and the despotic power of the state, thus eroding the legitimacy of a social order based on tradition. The writings of Voltaire and Rousseau were read widely; and those who read these books saw the world through new eyes, eyes that were questioning, critical and rational.
Second: print created a new culture of dialogue and debate. All values, norms and institutions were re-evaluated and discussed by a public that had become aware of the power of reason, and recognised the need to question existing ideas and beliefs. Within this public culture, new ideas of social revolution came into being.
Third: by the 1780s there was an outpouring of literature that mocked the royalty and criticised their morality. In the process, it raised questions about the existing social order. Cartoons and caricatures typically suggested that the monarchy remained

absorbed only in sensual pleasures while the common people suffered immense hardships. This literature circulated underground and led to the growth of hostile sentiments against the monarchy **Based on the above paragraph (information), answer the following questions:**
