Job History

1. Started working for Oracle as a **part-time intern** while I was still going through college. For the **Oracle Business Process Management** team (explain the product)
2. My first role was in the back-end team. We were in charge of:
    a. Project persistence
    b. Project collaboration
    c. Security
3. Once my internship was over I was offered a full-time position in the same team. I grew in the role from intern to junior and then senior dev. Some of the challenges during this phase were:
    a. **distributed VCS** in-house solution based on SVN (see patents).
    b. Improved project loading performance by **5x**.
    c. Implemented the edition lifecycle and project collaboration between web and native applications.
4. On 2014 I was the first member of my team to be relocated in the US. I served as contact point with other teams already in the US and with my bosses boss.
5. Fast-forward a couple of years: half of my team gets relocated to the US. All design-time teams get merged into a big one.
6. In this new big team (~30 devs) I play the role of **technical leader.** Some of my responsibilities are:
    a. Define architecture (like cloud native architecture)
    b. Help the team with feature definition, sizing and execution.
    c. Doing code reviews
    d. Researching and fostering new technologies (Java 8, Kotlin)
