Department: Science Unit: Speciation Course: Biology

Author: Julie Wake

ELO #13 : Students will construct evidence-based explanations showing how evolution results from reproduction, genetic variation, competition for resources, and the survival and reproduction of well-adapted individuals.

Standard(s) ELO is based upon: L.3.2.1.4

Learning Targets
1. I will evaluate evidence that demonstrates how changing environmental conditions can lead to increased populations of specific species
2. I will analyze evidence that supports claims about how environmental changes can result in the emergence of new species over time
3. I will assess evidence indicating how certain species may face extinction due to changing environmental conditions.
