

M. Xavier Punithan Ph.D., / 자비에르 푸니탄

Principal Research Engineer, SDV Task

Smart Mobility Lab, A2X Center,

CTO Division , LG Electronics.

- I am currently working as Principal Research Engineer in LG Electronics, Seoul, South Korea
- Have been the project coordinator for "Pullpri", a service orchestrator open source project under Eclipse SDV
- Have served as Technical Advisory Committee Member in 2024-2025 - the experience would help me to serve efficiently in the steering committee, if elected
- Have been instrumental in starting the SDV initiatives in our organization in 2021
- Have represented LG Electronics in various technical consortiums such as C2C-CC, 5GAA, etc., in the past, and contributed for European-wide deployment projects such as SCOOP@F, C-ROADS

I believe, through my election in the steering committee, I would be able to add diverse business and technical perspectives to the Eclipse SDV WG activities from this part of the world.

I thank you so much for the opportunity.
