

DPLA MAP Proposed Updates

The table below documents the proposals for modifications and additions to the DPLA MAP.

Topic	Documentation	Proposal(s)
IIIF Implementation	6-29-2017 notes 7-25-2017 notes 8-24-2017 notes	1. Use edm:hasView for a webResource representing the IIIF object. That webResource contains dcterms:isReferencedBy for the manifest
Rights issues	7-13-2017 notes	1. Standardized and non-standardized rights statements, as well as rightsholder, would be in ore:Aggregation and would be removed from sourceResource and webResource, rather than moving the standardized rights statement around. 2. Separate rights statements from licenses into separate properties and enforce one or the other. If someone submitted both, the license would supercede the rights statement. They would still be required to submit either a statement or license. 3. Licenses would be stored in dcterms:license and labeled "License"
Collection class	7-25-2017 notes 8-10-2017 notes	1. Add isShownAt but do not make it required
Genre label	8-24-2017 notes	1. Property remains unchanged; change label to subtype
URIs vs strings	9-7-2017 notes	1. For edm:place class, use MODS hierarchicalGeographic terms 2. Add skos:prefLabel to edm:TimeSpan
Intermediate provider	9-7-2017 notes	1. Allow more than one intermediate provider
