

**PreK 3-4 - Young Scientists (4:15 PM)*
Thursday**

Scientists are naturally curious people, and so are our preschool students! Armed with clipboards and data sheets, students will use the scientific method to develop questions about what is observed, utilize their senses to investigate further and draw conclusions from their data sheets. Projects will be based on the work of actual scientists (Mae C. Jemison, Stephen Hawking, Isaac Newton, to name a few!), and students will end the class with a short video featuring that scientist and/or the scientist's work. It is never too early to explore our world - and beyond!

**Kindergarten - Junior Scientists (4:00 PM)*
Wednesday**

Science is cool and hands-on! Armed with clipboards and data sheets, students will use the scientific method to develop questions about what is observed, utilize their senses to investigate further and draw conclusions from their data sheets. Projects will be based on the work of actual scientists (Mae C. Jemison, Stephen Hawking, Isaac Newton, to name a few!), and students will end the class with a short video featuring that scientist and/or the scientist's work. We will see many different types of scientists from various backgrounds and experiences.
