

Run Your Business on Google & the Cloud Course Description

Today's consumer has little patience and is very demanding with high expectations of how they want to be communicated with and serviced. As a real estate practitioner, you can't slow down because you are out of the office or don't have your computer with you. You need to be able to be just as productive in the field (or even while on vacation) as you are in your office.

But how is that possible?

The Cloud is the key to being a modern business in a multi-device mobile world. And no one offers a better & more secure cloud-based solution to run your business than Google.

In this session, each student will learn how to leverage the cloud and the Google ecosystem (apps, extensions, integrations, etc.) to help reduce your business operating costs and improve your work efficiency, communications, and more in a secure environment.

In this session, we will explore what the cloud is, how to leverage it, and most importantly maintain safety, security, and compliance in all aspects of your business.
