Product Review:

Review Headlines (Pick one):

“Honest Scribble Review. Is this eBook creator any good?”

“My Honest Scribble Review. Read NOW!”

“Interested in Scribble? Read BEFORE You buy!”

If you’ve been marketing online for more than 5 minutes, you’ll know that lead magnets, eBooks and reports are powerful ways to build your list or sell directly for profit. But you’ll also know they’re a serious headache to create too. All that writing, designing and formatting... URGHH. Enough already!

That’s why a new product recently caught my attention — it’s called Scribble and it’s an online tool that instantly creates professional eBooks,

reports, whitepapers and other types of digital books with a few clicks or taps.

This concept isn't new. There have been a lot of different eBook creator tools in the past. But if you've used most of them, you'll know they all share the same frustrating flaws:

- They have crappy templates.
- They are buggy and unreliable.
- They often require additional tools

What is Scribble?

Scribble is different. It's packed with professional templates, seriously good looking covers, and surprisingly, is totally bug free. In fact, the whole process of creating an eBook with Scribble is satisfyingly easy and smooth.

Heck, it's FUN.

But perhaps most remarkable of all... Scribble comes loaded with some of the most powerful features I've seen in an eBook creator tool.

Here's just some of the things this bad boy can do:

- Automatic table of contents
- Automatic headers and footers
- Automatic pagination
- Drag and drop design

- Add or delete pages
- Add your own media
- 300+ Google Fonts
- 50 eBook templates (in 15 different niche categories)
- 10 different eBook themes
- Automatically create content (woah.)
- Turn your book into a flipbook (double woah.)

Seriously, if that's not enough to make you want to check this thing out, I don't know what else to say. Apart from this — Scribe isn't perfect. Yes, it's powerful. Yes, it's going to save you tons of time and money creating eBooks. But it does have a few flaws.

What I didn't like about Scribe.

First, the upsells. There's 4 of them! It's kind of annoying because they've saved the best features in them. Do you need them? Well, Scribe works fine without the upsells so you don't have to, BUT if you want more power out of it I recommend grabbing them all.

Here's a rundown of the upsells:

Upsell 1 — Scribe professional.

Unlock 150 more professional eBook templates (the best ones are in the professional version), graphics and even more ready-made content for all

kinds of niches. (Just so you know, single templates from stock websites would cost you up to \$450... for just ONE template!) Great for those that want more variety, content and heavy users.

Upsell 2 — Scribble Prime.

Get 15 premium “limited edition” new eBook templates added to your Scribble dashboard every month. This will increase your library over time, and make you stand out from other users. It works out to less than two bucks for a template! (Much cheaper than stock sites.) Great for moderate users.

Upsell 3 — Scribble Fantasia 3D.

This includes 2-in-1 features.

1.) Unlocks a 3D cover creation tool inside your dashboard, allowing you to turn “flat” covers into lifelike, 3d covers. Great for getting more attention and making your books look and feel more “real.” People do judge a book by its cover, so something to keep in mind.

2.) Create “Flipbooks” that turn your eBooks into interactive and animated pages that turn like in real life. They can be linked to from anywhere online, as well as embedded on web pages with a single piece of code. This is really cool.

Upsell 4 — Auto Job finder software.

If you’re going to be using Scribble to create eBooks as a service to get paid, then Auto Job Finder is something that you need. It will automatically find you related jobs across various freelance websites and notify you so that you can fulfil them. A huge time saver and money earner.

What I loved about Scribe

Without doubt, it's the pro designs, the simplicity and the speed at which you can create seriously sexy eBooks, on the fly.

And the fact you can turn your eBook into a flipbook is just icing on the cake. It just makes your books look and feel more "real" and that's a good thing for engaging your readers.

The amount of customization is just off the charts too. You can tweak your designs, layouts and everything in-between to your heart's desire. It even creates a table of contents for you, inserts all your content into a nice layout, play around with the formatting and design, add stuff, delete stuff... it's only limited by your imagination.

But if the idea of too many options scares you... don't worry. Scribe is designed to keep things simple. You can just go with the ready-made templates, layouts and styles, insert your content automatically, and boom... you've got a pro eBook that's going to grab more attention, build trust, engage your readers, and help you stand out in a sea of competition.

About the creator

Scribe has been developed by Adeel Chowdhry, who is a well-known internet entrepreneur and best seller, with over ten years of experience and has previously created worldwide hits such as Pixel Studio FX which sold tens of thousands of units all around the world. He's known for creating high quality professional solutions and I expect no less from Scribe.

Final thoughts

The standard has risen online. These days, your eBooks can't look like crap, or people just won't want to optin, buy or read it. And because people

are busier than ever, they will only spend a couple of seconds deciding whether your book is worth reading or not.

With Sqribble, you can instantly create books that scream trust, credibility and value, and attract more subscribers and sales.

Creating eBooks has always been a pain for most marketers, but with Sqribble, it really doesn't have to be. With a few clicks, you can choose a template, add content, tweak the layout and then publish online... in just minutes from now.

Instead of spending hundreds — or even thousands — on freelancers, or even more money on fancy software, I would seriously recommend giving Sqribble a test drive first... I think you'll be amazed how powerful, easy and quick the whole experience is.
