

Clover Guide

Modules we have done:

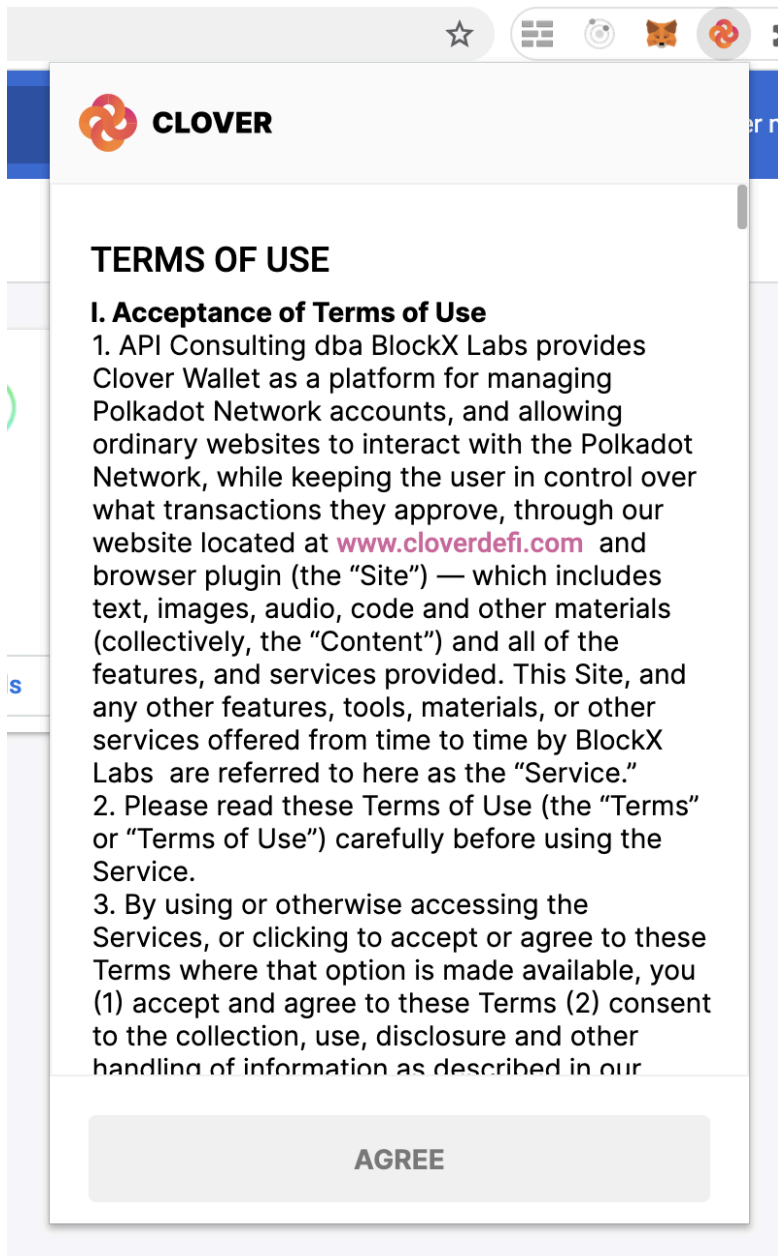

1. **Apps:** A Portal into the clover networks. Provides a view and interaction layer from a browser. Hosted on <https://apps.ownstack.cn/>
2. **Clover Dapps:** Support three DeFI protocols, such as token swap, liquidation pool and yield farming. Hosted on: <https://swap.cloverdefi.com/>
3. **Clover wallet:** A browser plugin for chrome and firefox. The plugin can be downloaded at <https://github.com/clover-network/clover-wallet/releases>
Please select the latest release.
4. **Clover mobile wallet:** A mobile version of clover wallet, support Android and IOS platform. You can download the android version via <https://drive.google.com/file/d/1VI-i7BqFa-JtcEn4ELcPRIYa0azak2Sz/view?usp=sharing>
For China mainland users, please install the android version via https://drive.google.com/file/d/1ea66gsKJVpJYIEGp7DvldswDj_dSjtol/view?usp=sharing

Steps for testing:

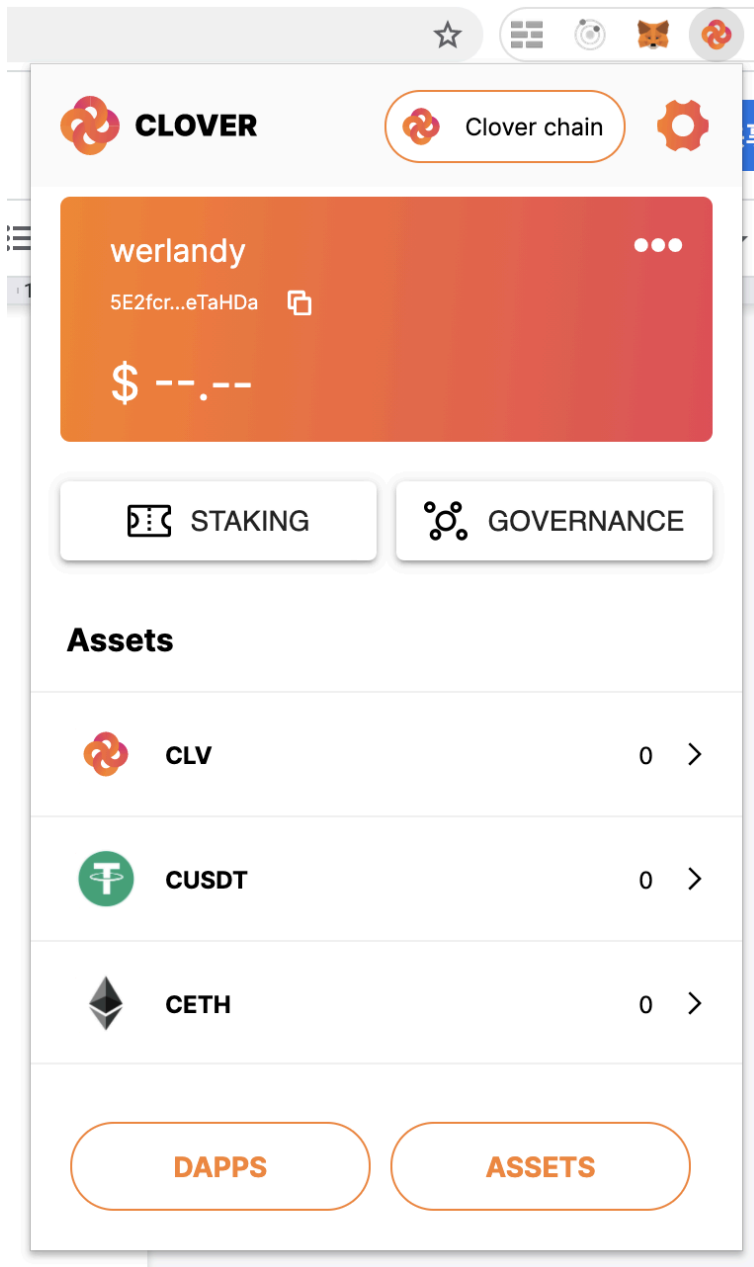

1. First, you should have Chrome installed on your PC. Then download the browser plugin and unzip it. Since the plugin hasn't been published to the Google store, you have to install it manually.
2. Open <chrome://extensions/> in your Chrome, and toggle the developer mode on. Please refer to the screen shot.

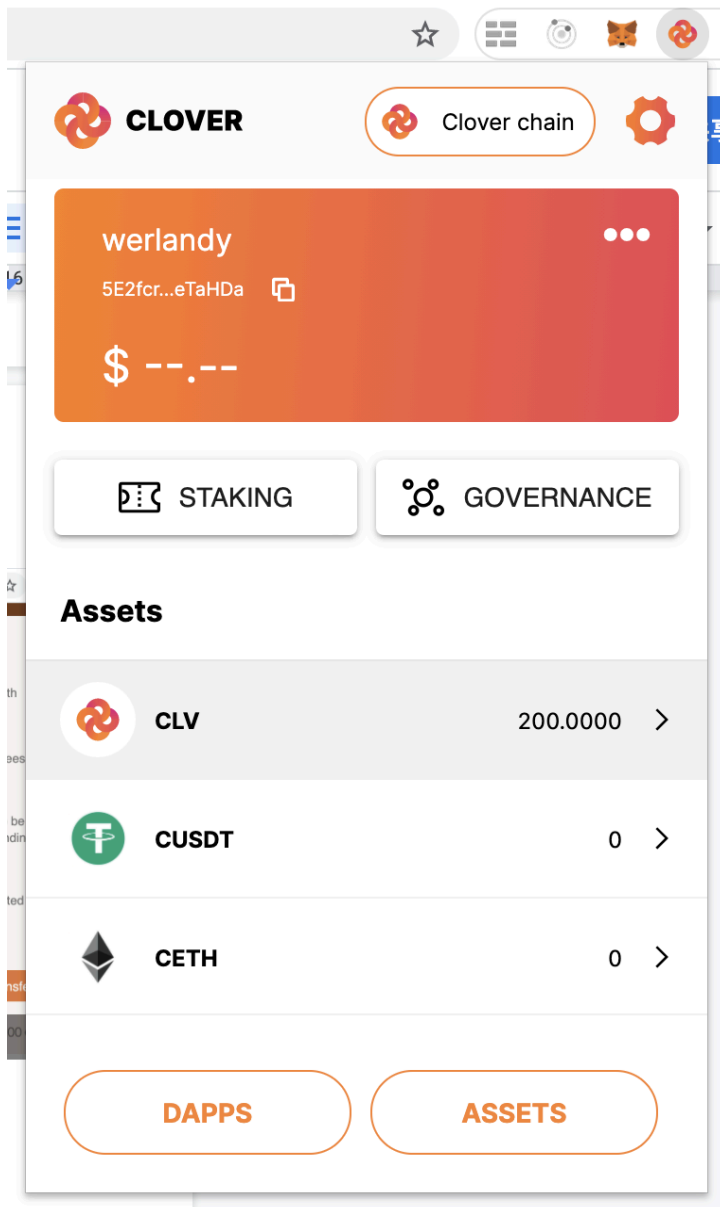

3. Click the 'Load unpacked' button on the left upper corner and select the unpacked plugin on your PC. Then the plugin is installed. When you open the wallet, you should see:

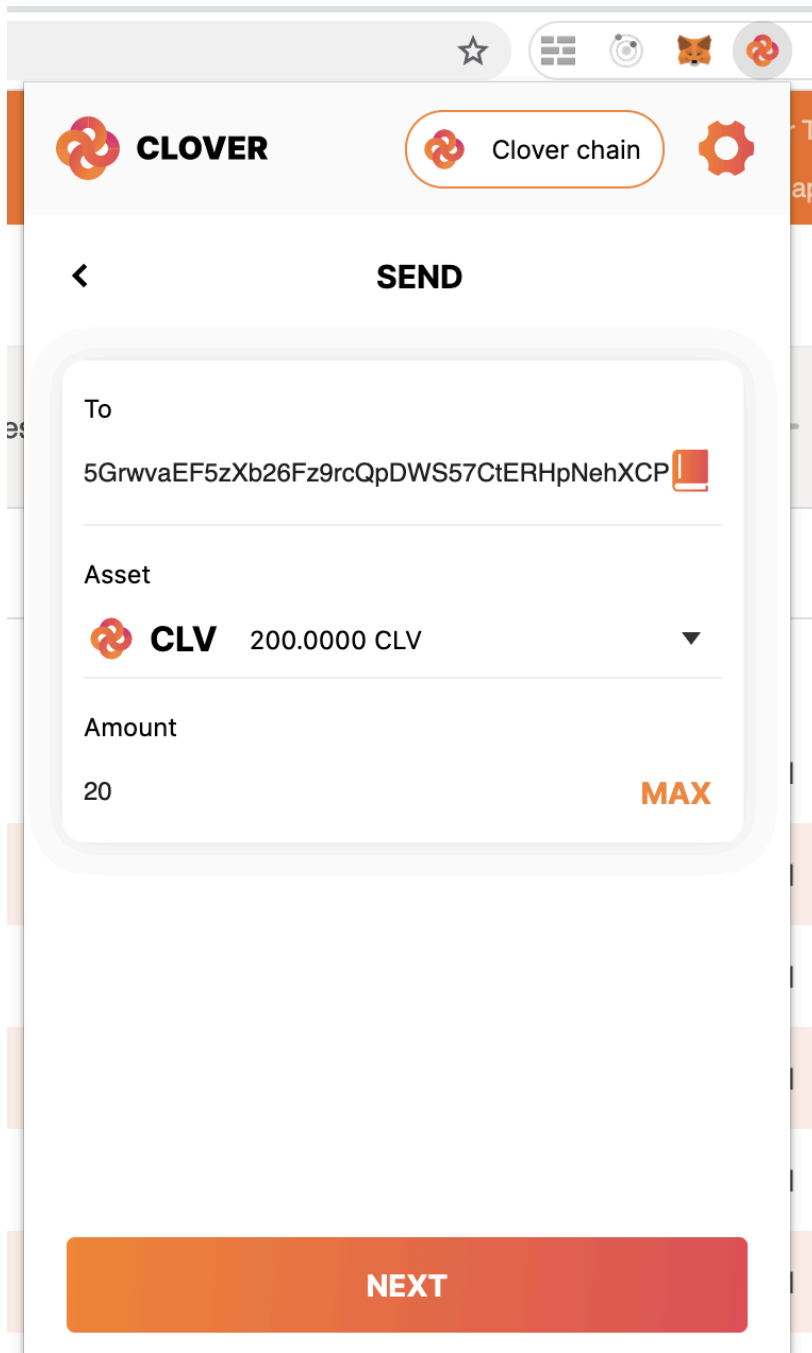

4. According to the wallet guide, you should be able to create your first account or import an existing account. When it is done, you will be directed to the dashboard page:

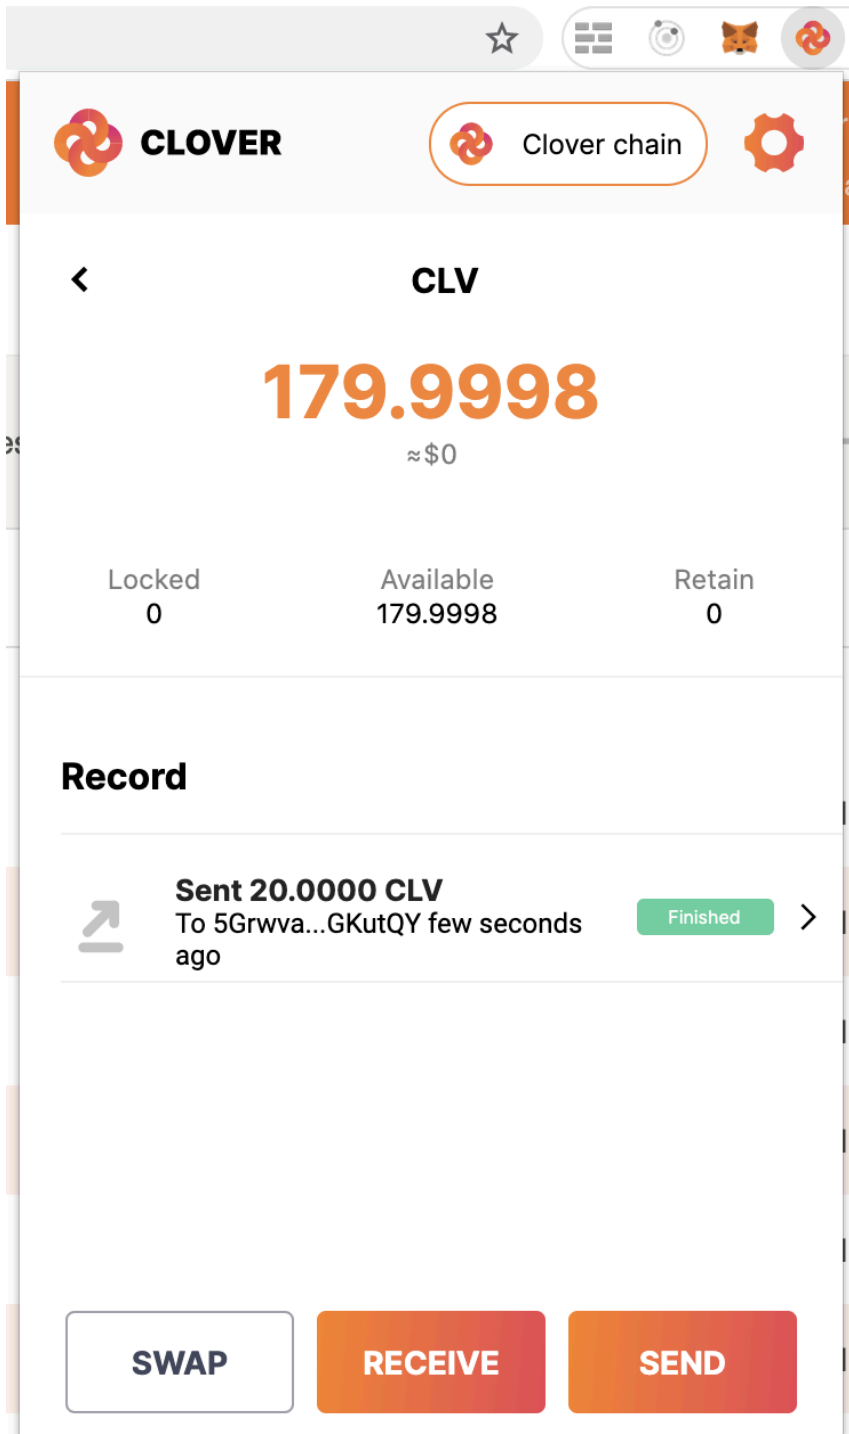

5. Request some tokens from the Clover team for testing.
Or import seeds “[tape ozone minimum battle arrow ladder box keep enrich pipe vintage width](#)” which has pre-founded tokens.
6. You should see the balance in your wallet:

7. Try the sending and receiving of CLV tokens:

You can select which kind of assets on the chain to be sent. Once the transaction is done, you can see the status from the transaction history:

8. You can switch between different substrate chains to view your different assets. Currently it supports Polkadot, Kusama and Acala.

DAPPS

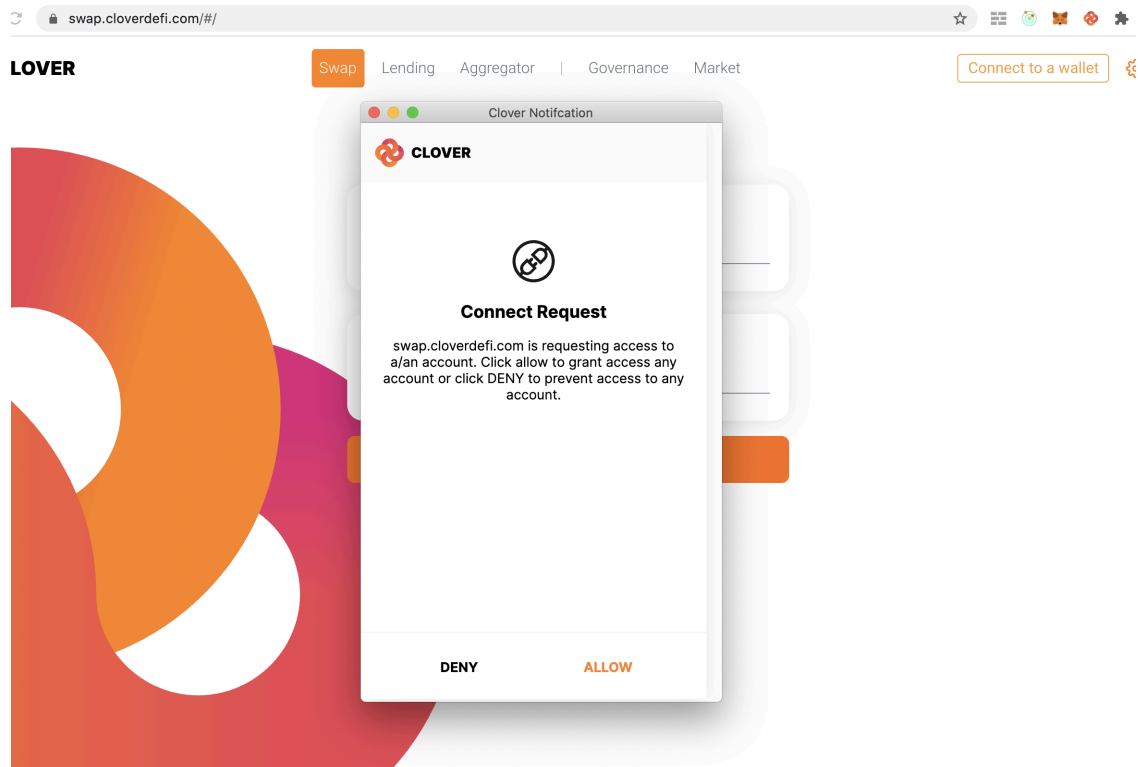

ASSETS

9. Open the Dapp website, and connect your clover wallet:

Select the 'Clover Wallet' from the popup list, and you can allow the wallet connection by clicking the 'Allow' button.

10. Try to swap between CLV and CUSDT:

Swap

Pool

Farm

CLV

45

MAX

Balance: 579.999874999853

CUSDT

41.284404

Balance: 0

Swap

Price: 0.9174 CUSDT per CLV

Minimum Received: 41.0790 CUSDT

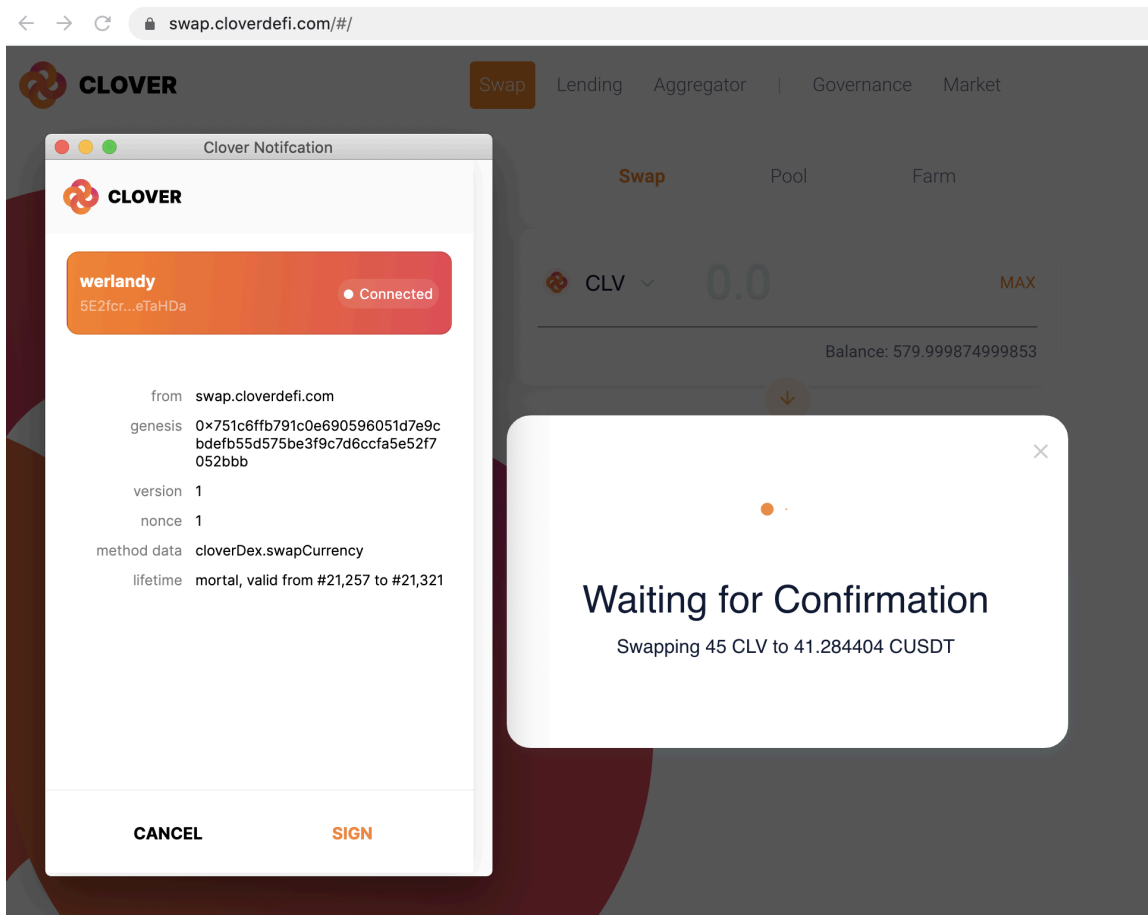

Price Impact: -0.0928%

Liquidity Provider Fee: 0.1350 CLV

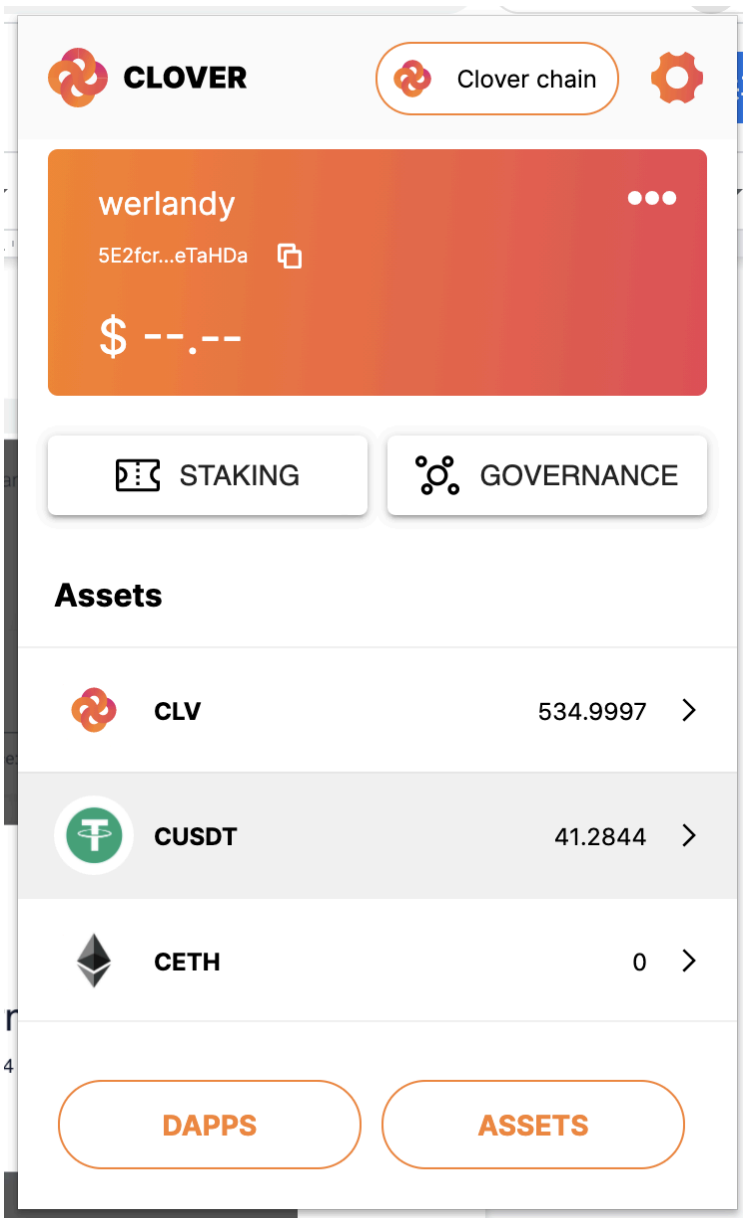

Route:

CLV > CUSDT

Sign the transaction:

After the transaction is done, check the balance of CUSDT of your account:

11. Try to put some token pair (CLV -> CUSDT) into the pool:

swap.cloverdefi.com/#/pool

VER Swap Lending Aggregator | Governance Market 5E2

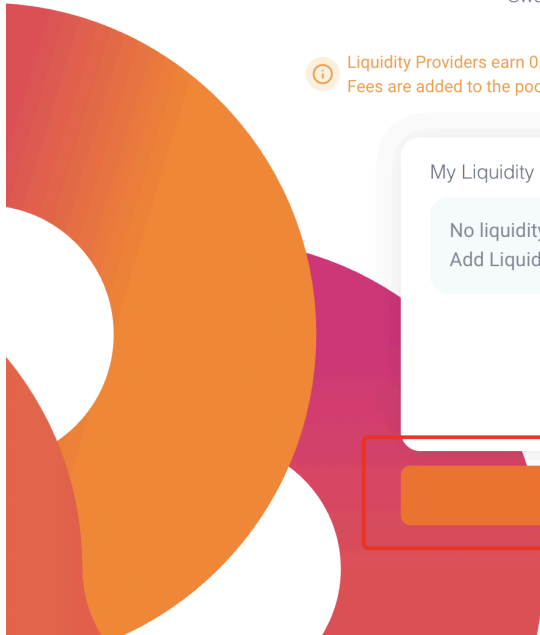

Swap **Pool** Farm

 Liquidity Providers earn 0.3% of all trades on this pair proportional to their share of the pool. Fees are added to the pool, and can be claimed by withdrawing liquidity.

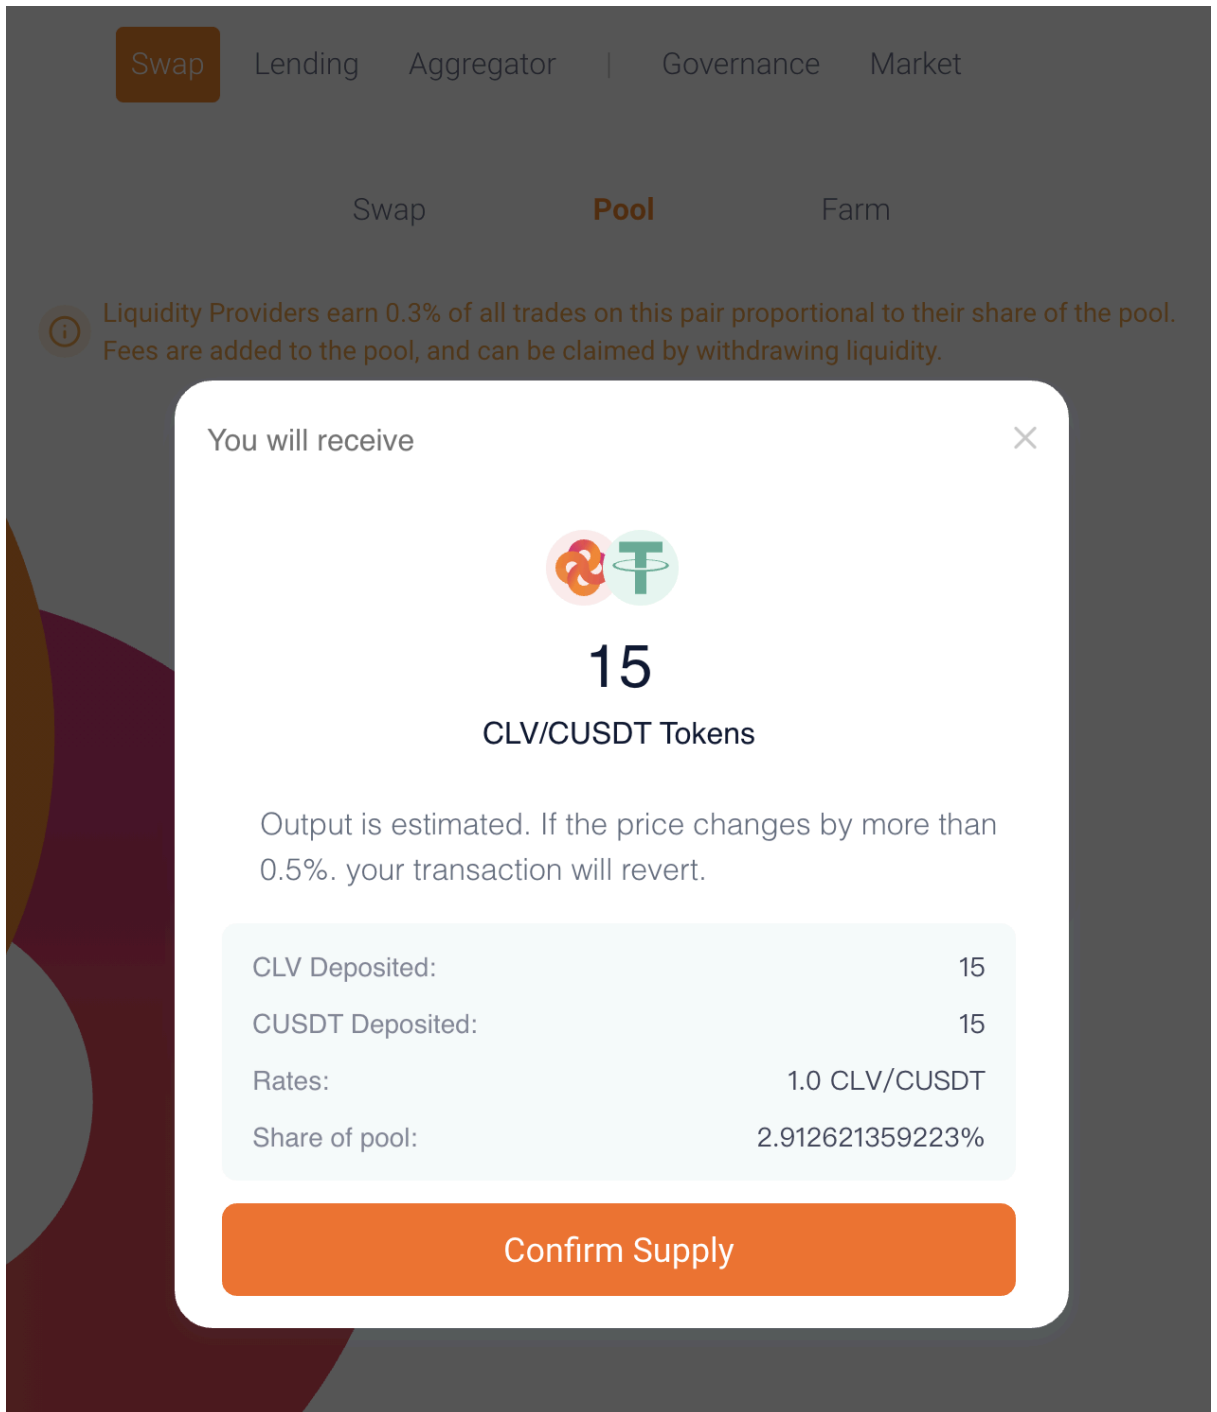

My Liquidity List

No liquidity found. You can provide liquidity by click Add Liquidity button below.

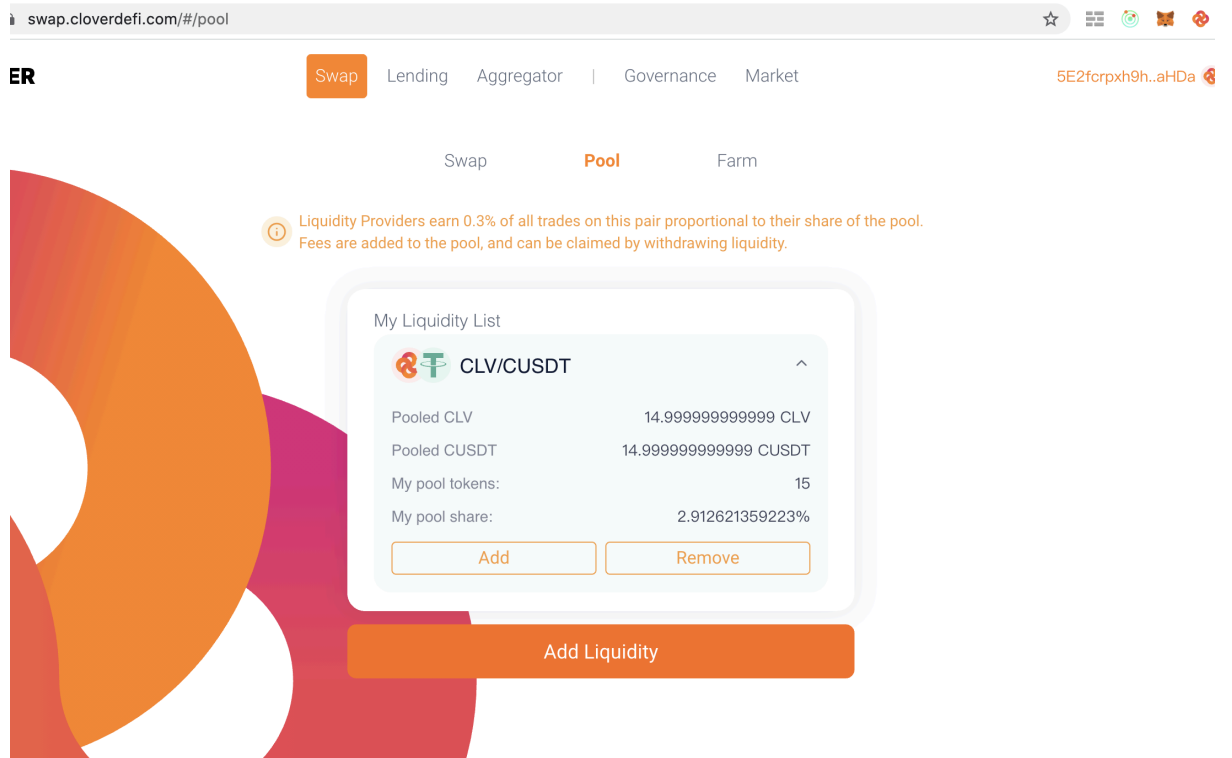

Add Liquidity

Input the tokens amount you want to supply, confirm and sign the transaction:

12. Then you can see your pool share, you can also add more liquidation or remove from the pool.

13. Install the android APK to your android phone to test the mobile version, since the feature is nearly the same with the plugin version, only giving some screenshot.
