“At Last One Of The World’s Foremost NLP Experts Reveals His Secret Blueprint & Toolkit For Masterfully Using The NLP Meta Model So You Can... Conversationally Eliminate Client’s Problems, Transform Limitations, Create Lasting Change... Quickly, Easily And Entirely RISK FREE...”

Dear Friend,

Have you ever wished you could transform friends, family and clients limitations in a fraction of the time they had been struggling with that very same problem?

... have you ever wished you were so good with the language side of NLP that people frequently thought you MUST be a mind reader because you seem to know things that they never shared?

...would you like to have the exquisite ability to “connect up the dots” and deliver penetrating insights on topics that previously you know very little about?

... do you wish to be the go to guy or girl?... that unique person whose insights and perspective is always in demand... where clients and family seek you out to help them find previously undiscovered solutions to seemingly daunting problems...

...would you like to become really good with two of NLP’s most powerful language and thinking models?

... have you ever wanted to know really well the ONE framework that every master trainer and highly paid consultant who uses NLP professionally to create great results for their clients uses?

Well the good news is, this person can be you.

The key is to get really good with two powerhouse models of NLP...

The first you may have heard of, perhaps even studied before it is called the Meta Model – and expert use with it lies at the heart of skillful work with NLP.

The second model is the a closely guarded framework that has never been written about in any book on NLP, but is known by many as the “Swiss army knife” tool for working with language and NLP. It’s called the Framing Tool.

In this exclusive home study program you will learn both.

Let’s first take a look at the Meta Model... a tool so powerful that Richard Bandler once said...

“Why Mastering The Meta Model Is One Of The Most Useful Skills You Can Ever Learn In The WHOLE of NLP”

Becoming really skillful with the NLP Meta Model lies at the heart of becoming really good with NLP. It is used extensively by every really good trainer and practitioner of NLP to get to results fast.

In fact if there is one tool that supersedes just about all the rest, in terms of immediate real world advantage and ease of use then the Meta Model would have to be it.

Michael_Breen When you know the Meta Model really well, it can accelerate your skills with

the rest of the technology such as mastering Strategies, Slight of Mouth, Sub-modalities and a whole lot more.

Yet the unfortunate TRUTH is many people who learn NLP rarely develop great skill with the Meta Model.

Yet when you learn the two EXPERT models thoughts in this training program you can rapidly get to the heart of your client's issue and have the tools to transform seemingly stuck problems quickly.

When you are working on making changes for yourself or helping others you will always have one of the most powerful tools ever created to cut through limitations, mis-perceptions and limiting beliefs AND best of all you will be able to do this entirely conversationally.

Yet the Meta Model has many, many uses.

Such as:

Being an excellent tool for persuasion and influence

Helping you quickly transform people's maps and models about any context (not just therapeutic ones)

Becoming an expert planner and problem solver

Become a better consultant and communicator

Be an expert coach, manager, analyst, hypnotist, parent

Eliciting high quality information (for engineering contexts for example or anywhere else where clear communication and the avoidance of mis-understandings is a must)

Doing trance work (yes you heard that correctly)

Changing beliefs

Installing strategies

Interrupting, changing and amplifying states

Become an expert trainer and facilitator

Designing and planning a new business venture

Using it as a tool for spiritual development

Become your own guru, change agent, expert

Etc. etc.

The list is potentially endless.

Yet the sad situation is most people simply don't know. But it doesn't need to be that way...

That is why I say that really mastering the Meta Model is one of the most rewarding and useful skills you can learn from the entire domain of NLP no matter what you do or aspire to be in your life.

The application of the two tools you will learn in this program is nearly endless.

Yet very few students who learn the Meta Model are aware or use the Meta Model in such a wide variety of contexts and applications.

This raises a good question...
