

Fruits per Clusters

Key Periods	Number of fruit/cluster
First two clusters of the season	5 fruits
Next clusters	4 fruits
6 to 8 weeks before heat wave season	3 fruits
8 weeks before end of the season	5 fruits

How to prune clusters

Pinch off the cluster as close as possible to the last flower you want to keep.

Important note:

When we say to prune your cluster at 3 fruits starting from 8 weeks before heat waves, we mean **the new clusters starting from that moment**.

Leave the previous clusters that are ripening intact.
