

1.Motion

Everything in this lab is always under the microscope. This web can be a view under our eyes. Like germs, bacterias under the microscope. We learn, create and grow in this lab. (learn in class, create in project and events and grow with communities) The homepage background can be a slow motion like germ under the microscope(or even our teamwork moments).

2.Navigation Bar

We also can apply the microscope gear in our navigation bar. Users can use a gear-like navigation bar to view our class and events. People can rotate the gear bar to change the date.

3.Questionnaire

A little questionnaire will really help users to find an appropriate plan for members or people who want to join this lab. The questionnaire will automatically recommend the cheapest plan for users based on their education-level, demand, and time-schedule.

4.My planner

People can build their unique plan on our website. We can only keep the information they need for classes, events and education level. For instance, a professional member obviously doesn't need a foundation or tutorial class, and some projects are really hard for beginners...etc.

Thus, people can only view useful information in their planner and it also can send new class information to their mailbox.

5.Donate Description

Depends on different donation fee, it can help us to build different projects. Users can view our upcoming planning projects and our achievements.
