Uses

- Hip fractures
- Femur fractures (Check with ortho first, they are touchy on this)
- Hip dislocations (Can be useful if you are worried about sedating, use lidocaine)

Relevant Anatomy

Femoral nerve and lateral femoral cutaneous nerves lie deep to the fascia iliaca, adjacent to the iliacus muscle. Femoral vein and artery lie superficial to this fascia. Both nerves begin branching extensively proximally and so care should be taken to perform injection of anesthesia as close to the inguinal ligament as possible, though some spreading superiorly will occur.

Ultrasonography

Identify femoral artery superiorly in the groin prior to any branches

Slide laterally to identify iliacus muscle and overlying fascia (possibly identify femoral nerve)

Insert needle lateral to target area and advance under in plane visualization

Supplies Needed

0.2% or 0.5% Ropivacaine (Max dose 3mg/kg) (Need a volume of at least 30ml) 6mg Decadron (Order as 10mg IV solution and draw up as needed)

Extension tubing

60cc syringe

Sterile gloves

20g or 22g spinal needle

Sterile probe cover

Chlorhexidine swabs

Drape
