

Preventative Maintenance and Repairs

Here at Precision Pool Care LLC. "Your Pool **IS** Our Priority" and we strive to prove that through our service and communication. Catching a problem before it is a problem is extremely important in the pool industry and can save you thousands of dollars; but all too often technicians are overworked or in a rush to finish a job, and this, unfortunately, has all types of unintended and undesirable consequences. WE CARE!! We demonstrate this by evaluating and inspecting equipment at every turn, which could be as simple as speaking with our customers about their "low PH level" which prematurely degrades expensive equipment internally like heat exchangers in heaters. It could be cracks in a skimmer which may lead to water loss and can be corrected inexpensively. Here at PPC we DO NOT keep industry secrets, we value your business and strive for clarity and the continued empowerment of every pool owner!!
