Article Info (10 pt)	ABSTRACT
	The 'Abstract' title should be written in 10pt, bold, Case Title fonts. The abstract should include the objectives, methods, and results of the study. Abstract text should be written in 10pt size, maximum 250 words in one paragraph on a separate sheet. Keywords should reflect the concepts contained in the article to facilitate access to relevant articles in search engines. The title 'keyword' should be written in 10 pt, bold, while the keyword is written in italics (3-5 words).

1. Introduction

This section includes background to the problem, a review of relevant literature, and research objectives. The introduction should explain why research is important, what has been done before, and how the research adds to existing knowledge (Shoffa, 2024).

2. Method

The methods section should describe the study design, population and sample, instruments used, data collection procedures, and data analysis methods. A detailed explanation allows the study to be replicated by other researchers.

Example: Research Design: This study used an experimental design with a control group and an experimental group. Population and Sample: The population in this study was grade 5 students in five elementary schools in Jakarta. A random sample of 100 students was taken. Instruments: Instruments used include validated academic achievement tests. Data Collection Procedure: Data is collected over one semester with direct observation and questionnaires. Data Analysis Methods: Data

are analyzed using t-tests to find out the difference between the experimental group and the control group.

3. Results and Discussion

Results

Present your research findings systematically. Use tables and figures if needed to clarify the results of the study.

Example: The results showed that the average academic achievement score of students in the experimental group increased by 20% compared to the control group. Table 1 and Figure 1 show a comparison of scores before and after the intervention.

Figure 1. Example of Figure

Table 1. Example Table and Description

No.	Name	Data

Discussion

Discuss the results of your research by linking them to previous research. Explain the implications of your findings, the limitations of the study, and suggestions for future research.

Example: These results are consistent with previous research showing that innovative learning methods can improve academic achievement. The implication of this research is the importance of teachers adopting innovative learning methods to improve student learning outcomes. Limitations of this study include limited sample size and short study duration. Future studies should include larger samples and longer observation periods.

4. Conclusions

The conclusion should include a summary of the main findings of the study and their implications. Do not include new information in the conclusion.

Example: This research shows that innovative learning methods significantly improve the academic achievement of elementary school students. The implementation of this method in the curriculum can help improve overall student learning outcomes.

5. Acknowledgment

Example: The author would like to thank University X for the support of the research funding and to all students and teachers who have participated in this research.

6. References

The reference list should be compiled according to the citation style adopted by JOELI. All sources cited in the text must be listed in the reference list and vice versa.

References are made by using APA style [heading of contents) and must be at a minimum of 20 sources with 80% from indexed international journals of Scopus, Clarivate Analytics Web of Science (SCIE & SSCI), PubMed, DOAJ or database entries of IEEE, ACM, ProQuest, CABI, Gale, EBSCO, accredited national journals of S1-S2. The remaining may come from indexed international proceedings of Scopus, Clarivate Analytics Web of Science (SCIE & SSCI), PubMed, DOAJ or database entries of IEEE, ACM, ProQuest,s CABI, Gale, EBSCO, Paten, and book of research results. References must be from 5 most recent years and most preferably 3 years. *(Mendeley)*

Example:
- Author, A. A., Author, B. B., & Author, C. C. (Year). Title of article. **Title of Periodical, volume number** (issue number), pages. DOI

Note: Make sure you check the writing guidelines from JOELI to ensure that your article meets all their specific requirements. Using this template, authors can ensure that their manuscripts are well composed and meet the standards set by JOELI: Journal of Educational and Learning Innovation.
