

All-on-X

A full set of fixed teeth, often in one day

Did you know? All-on-4 and All-on-6 replace an entire arch of teeth with a fixed bridge on 4-6 implants. No removal, no adhesives, no slipping — and you usually leave with teeth the same day.

WHY IT BEATS DENTURES

- **Fixed:** doesn't come out at night; no adhesives
- **Preserves bone:** implants stop the jawbone resorption dentures cause
- **Real eating:** steak, apples, corn on the cob — back on the menu

WHO'S A CANDIDATE

- **Failing teeth** across an arch (perio, fractures, decay)
- **Denture wearers** ready for a fixed option
- **Healthy enough** for implant surgery; non-smoker or willing to quit

WHAT WE'LL ASSESS

- Bone volume in the upper and lower jaw (3D CBCT)
- Gum health and biotype
- Bite, jaw relationships, and TMJ
- Systemic health (diabetes, blood thinners, etc.)
- Smoking status and oral hygiene readiness

THE GOOD NEWS

Most patients walk out the day of surgery with a fixed provisional bridge. ComfortLase photobiomodulation speeds healing, and the final zirconia bridge is delivered 4-6 months later — designed to look better than natural teeth.

THE PROCESS

1. **3D CBCT scan** & digital planning.
2. **Extractions + implants** placed in one surgery (under local + optional sedation).
3. **Same-day provisional bridge** attached to the implants.
4. **4-6 months healing** while bone integrates.
5. **Final bridge** placed; 3-month maintenance long-term.

Ready to be done with dentures?
