

Below shows the proportion of teachers and students of color for U.S. school districts. Circles are sized to the number of all students. The teacher of color gap is the percentage of students of color less the percentage of teachers of color. The larger the gap, the less diverse the teacher population is compared with the student population.

*The race gap was calculated by subtracting the share of students in a given race or group of races from the share of teachers of that same race or group.
