http://llnw.blizzard.com/wow-pod-retail/NA/15050.direct/TempMig/5.0Migration-data/MigrationContent_enUS.MPQ

Instructions :

1) There are only 3 files to download :

MigrationContent_base1.MPQ = 2.3 GB (roughly)

MigrationContent_base2.MPQ = 3.9 GB (roughly)

MigrationContent_enUS.MPQ = 272 MB (roughly)

(File sizes are for OS X . On windows the file sizes will be slightly different then OS X as windows counts 1024 bytes in a KB while OS X does 1000 bytes. I've checked and the differences between them are trivial - like a few hundred bytes)

I have 3 sets of links there so you can choose which CDN you would like to download from. If you're on a university/school/corporate connection you may wish to change http to https to get around filtering software.

2) Once downloaded they go in :

Wow folder -> TempMig -> 5.0Migration-data

3) There may already be MPQ files in there. These are partially downloaded MPQ files with the data that hasn't been downloaded filled in with junk data.

Just copy over the ones you've already downloaded and replace the files that are in there already. Or delete the old ones and put in the newly downloaded ones.

4) Once done open the Launcher and check in the Connection Information that 21.0 GB of 21.0 GB has been downloaded.

GENERAL FORUMS POST ON THIS :
